SKITII TRIALS PLATFORM

Trial Admin Panel Design

Leadership overview of the Trial Admin sidebar:
Dashboard, Setup, Operations, Analytics, and Music.

DATE
August 2026

APP
Skitii Trial Admin Frontend (Next.js · port 3020)

1. Purpose

A web admin console for Skitii clinical trial operations (Yenepoya and future institutes). Central admins can:

1. **Set up** trials, institutions, and institute↔trial mappings
2. **Operate** patient enrollment and therapy sessions
3. **Analyze** session and weekly-form completion
4. **Browse** the control-group music pool

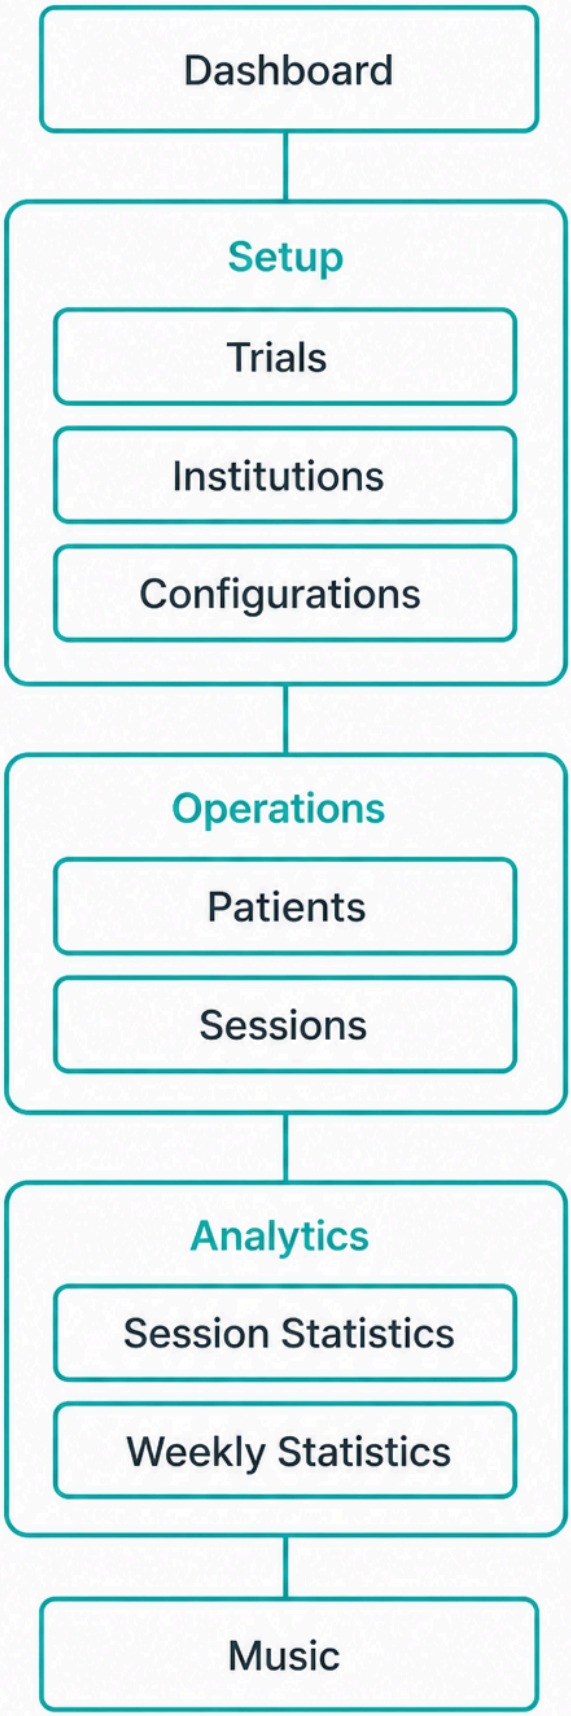

Tablet clinicians use the HNF mobile app; this panel is for **central / trial admins**.

2. Information architecture (sidebar)

Sidebar IA

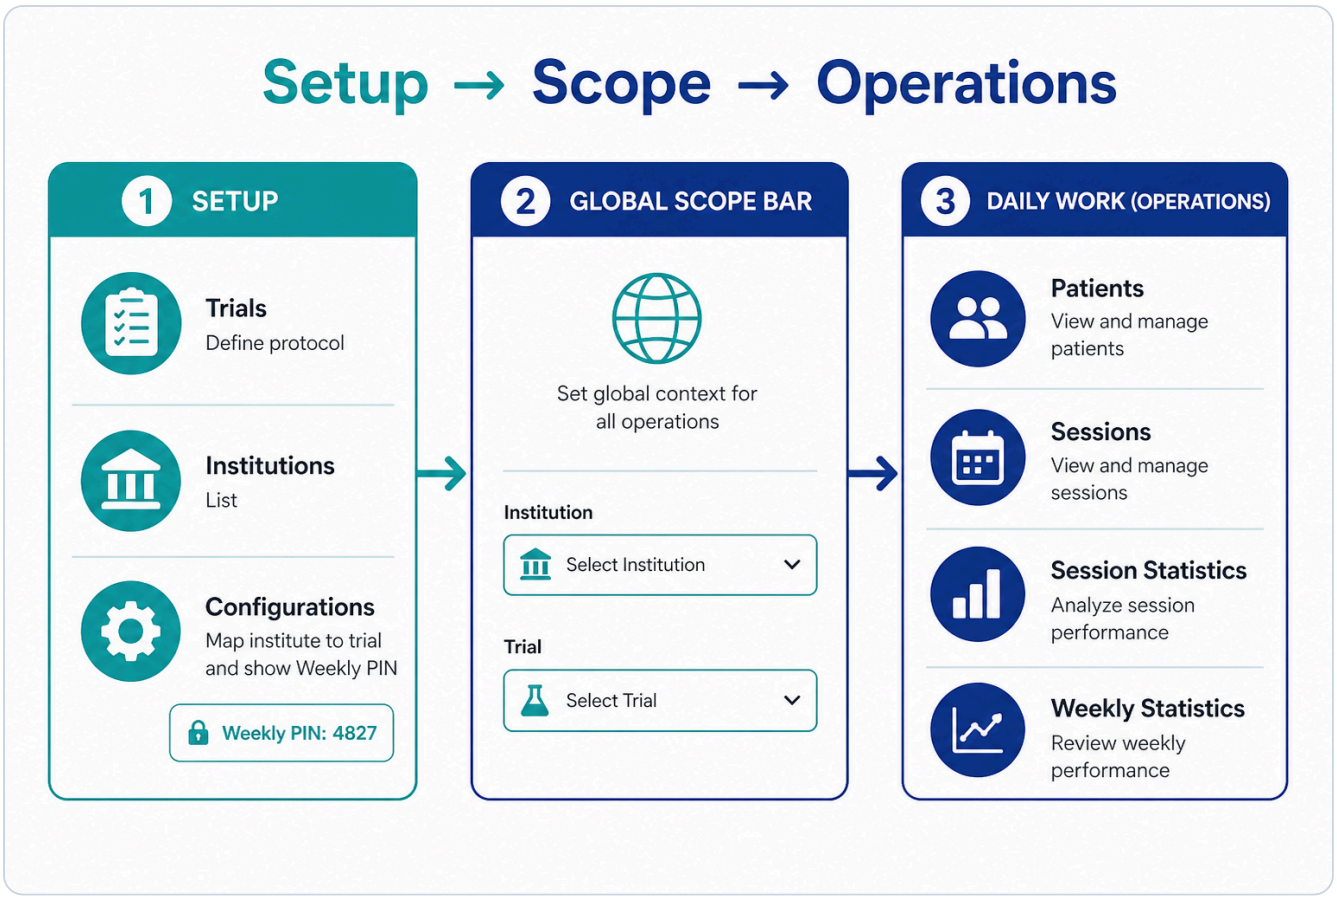

Dashboard
Setup
Trials
Institutions
Configurations
Operations
Patients
Sessions
Analytics
Session Statistics
Weekly Statistics
Music

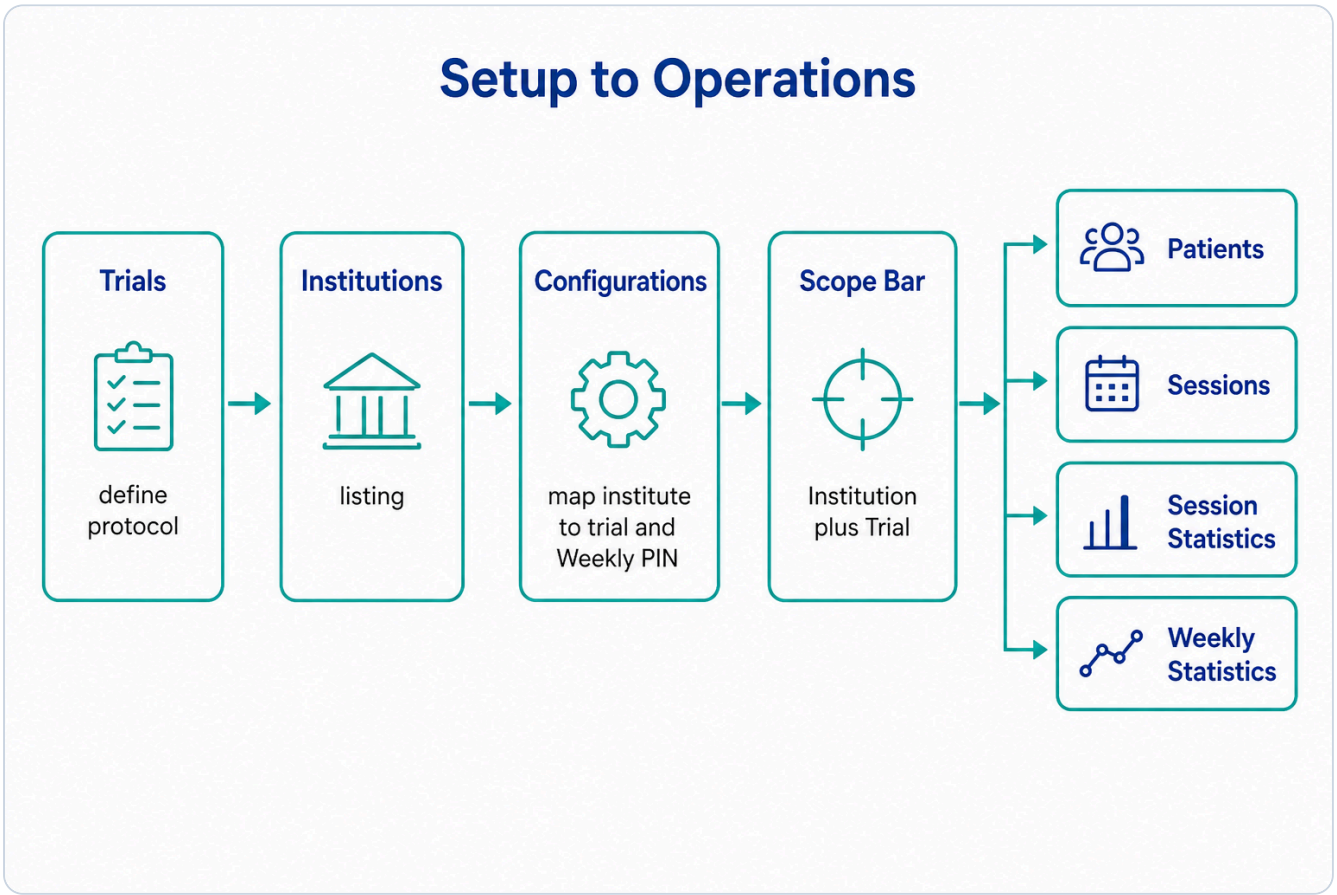

```
Dashboard
─────────────────
Setup
  · Trials
  · Institutions
  · Configurations
─────────────────
Operations
  · Patients
  · Sessions
─────────────────
Analytics
  · Session Statistics
  · Weekly Statistics
─────────────────
Music
```

Section	Role
Dashboard	Counts + shortcuts
Setup	Protocol & mapping (infrequent)
Operations	Day-to-day clinical data (scoped)
Analytics	KPIs & drill-downs (scoped)
Music	Control music catalogue preview

Global scope bar (Institution + Trial) appears on Dashboard, Patients, Sessions, and both Statistics pages.

3. Setup → Scope → Operations

```
Setup: Trials ──define──► Protocol (shifts, weekly steps)
Setup: Configurations ──map──► Institution runs that protocol
         │
         ▼
Scope bar (Institution + Trial)
         │
         ├── Operations: Patients / Sessions
         └── Analytics: Session stats / Weekly stats

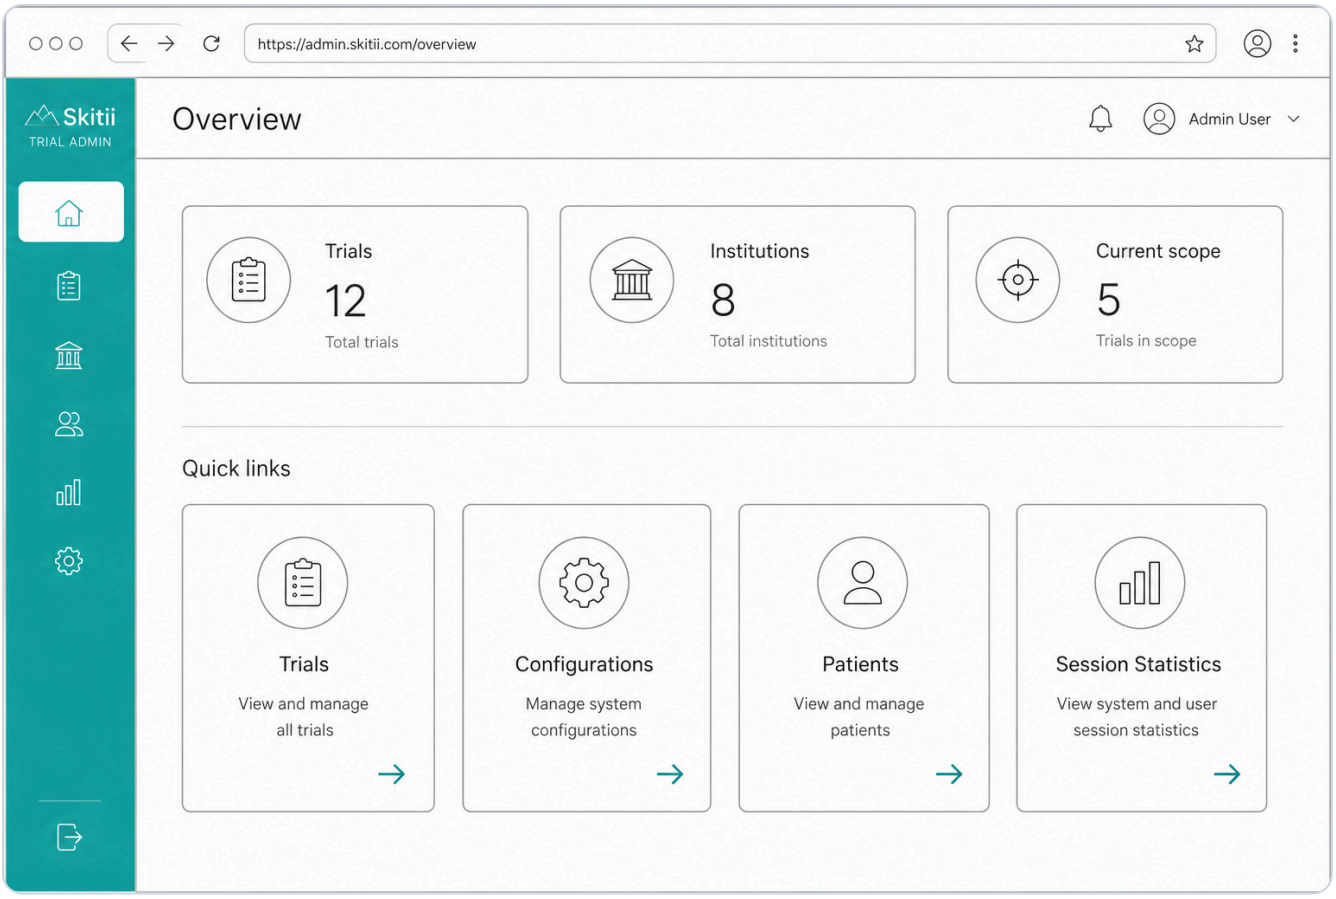

Dashboard ──overview + shortcuts──► any of the above
Music ──independent catalogue preview──
```

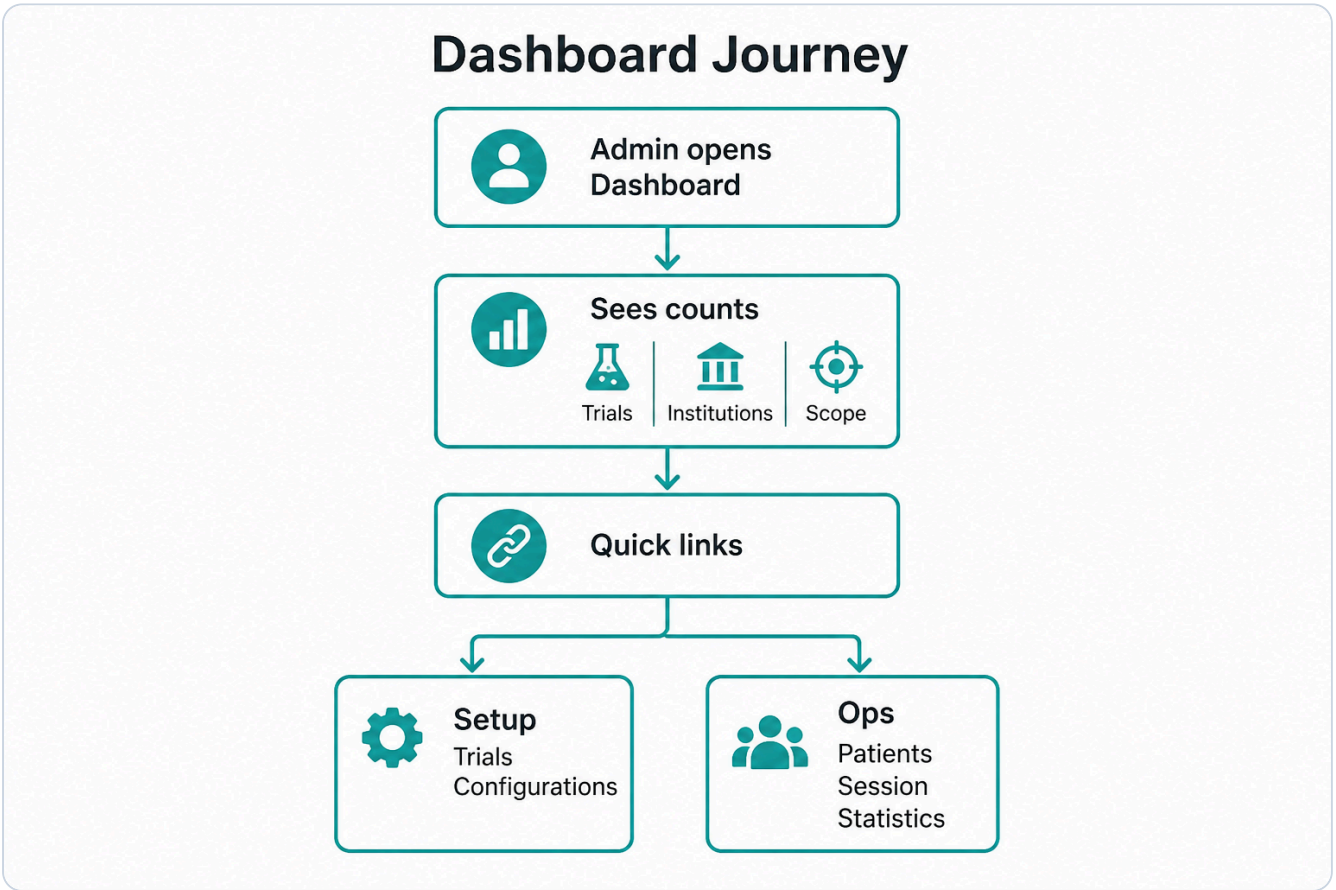

4. Shell & design language

Element	Design choice
Layout	Collapsible left sidebar · top bar (page title, theme, logout)
Scope	Institution / Trial selects above content when needed
Brand	Teal primary accents, Skitii logo
Theme	Light / dark
Components	Cards, badges, tables, dialogs, skeletons, toasts
Auth	Email OTP via Product Backend → JWT for Trial GraphQL

5. Dashboard

Route: `/dashboard`

What this module shows

Block	Content
Trials card	Total protocols · how many are *active*
Institutions card	Count of trial institutes
Current scope card	Selected trial id and institution
Quick links	Jump to Trials, Configurations, Patients, Session Statistics

No create/edit forms here — overview and navigation only.

---

6. Setup

6.1 Trials

Routes: `/trials` · `/trials/new` · `/trials/[trialId]/edit`

What we are adding in this module

Screen	What admin can do
List	See all protocols with status badge (active / inactive / completed); open edit; start **Create draft**
Add (Create draft)	Define a new trial protocol on a dedicated page
Edit	Update the same fields as create; change status

Add / Edit trial — information captured

1. **Basics**
   - Trial ID (create only), name, status
   - Duration (weeks), shifts per day
   - Weekly form interval (days), form reminder days before expiry
   - Clinical day start hour (e.g. 4:00 AM clinical-day cut)
2. **Shift windows** (repeatable rows)
   - Shift number, label (Morning / Afternoon / Night)
   - Start time, end time, crosses-midnight flag
3. **Weekly form definitions** (repeatable rows)
   - Study week number, label
   - Ordered step keys for that week (e.g. `vitals, hads, hrv, gad7_phq9`)

Weekly PIN is **not** entered here — it is shown under Configurations and rotated by backend cron.

6.2 Institutions

Route: `/institutions`

What we are adding in this module

Screen	What admin can do
List only	View trial institutes from Auth DB (`SKITII_TRIAL`)

Columns shown: name, email, active trial, number of configurations.

No add/edit of institution master data in Trial Admin (that stays in product/auth). Mapping an institute to a trial is done under **Configurations**.

6.3 Configurations

Route: `/configurations`

What we are adding in this module

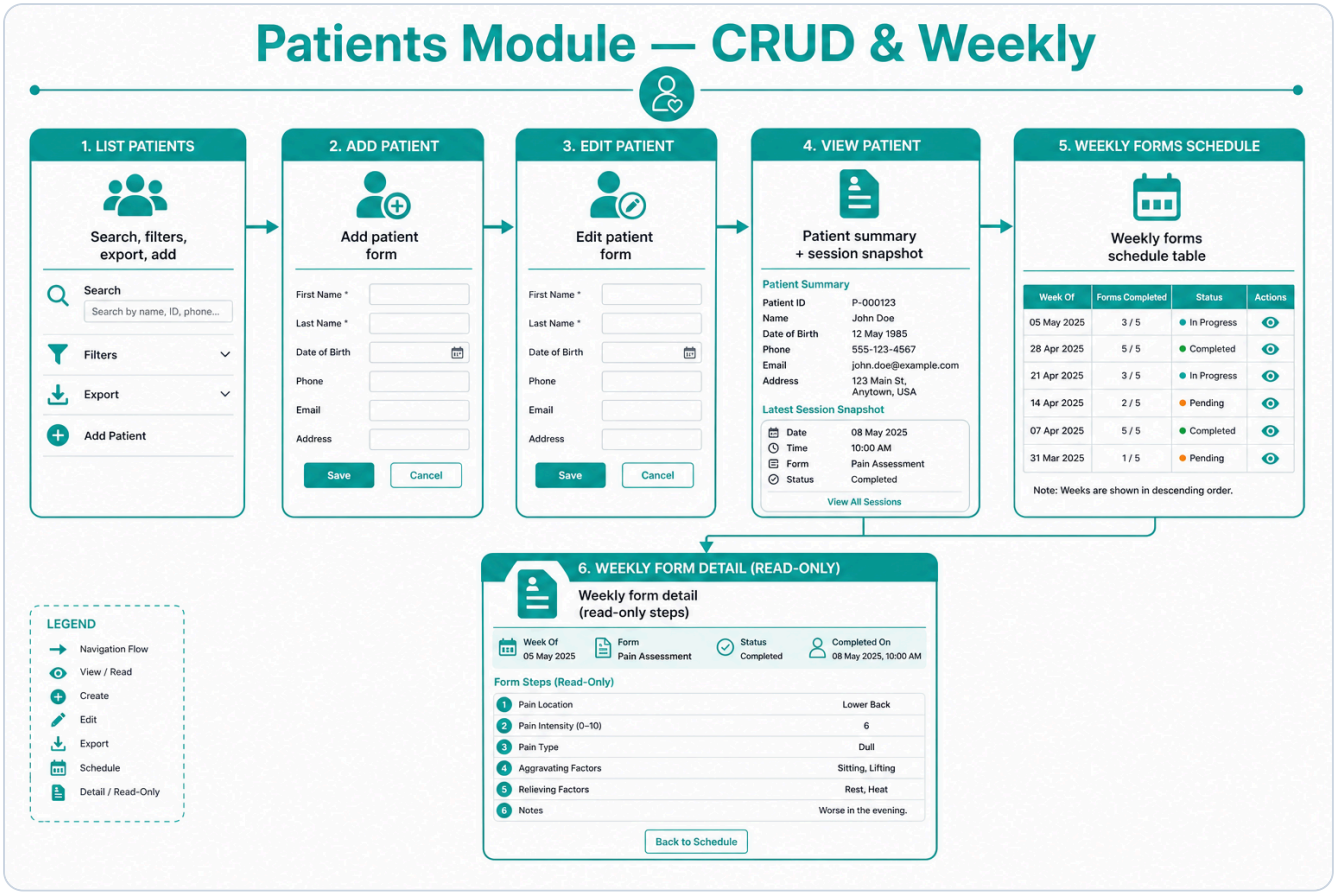

Area	What admin can do
Weekly PIN	View current 4-digit PIN for the active trial; **copy** to share with institute staff (read-only; no manual rotate in UI)
Create configuration	Pick institution + trial, set active flag → create institute↔trial mapping
Mapping list	Table of existing mappings: institution, trial, weekly PIN, status; can update active flag

Separates **protocol definition** (Trials) from **who runs which protocol** (Configurations).

7. Operations

7.1 Patients

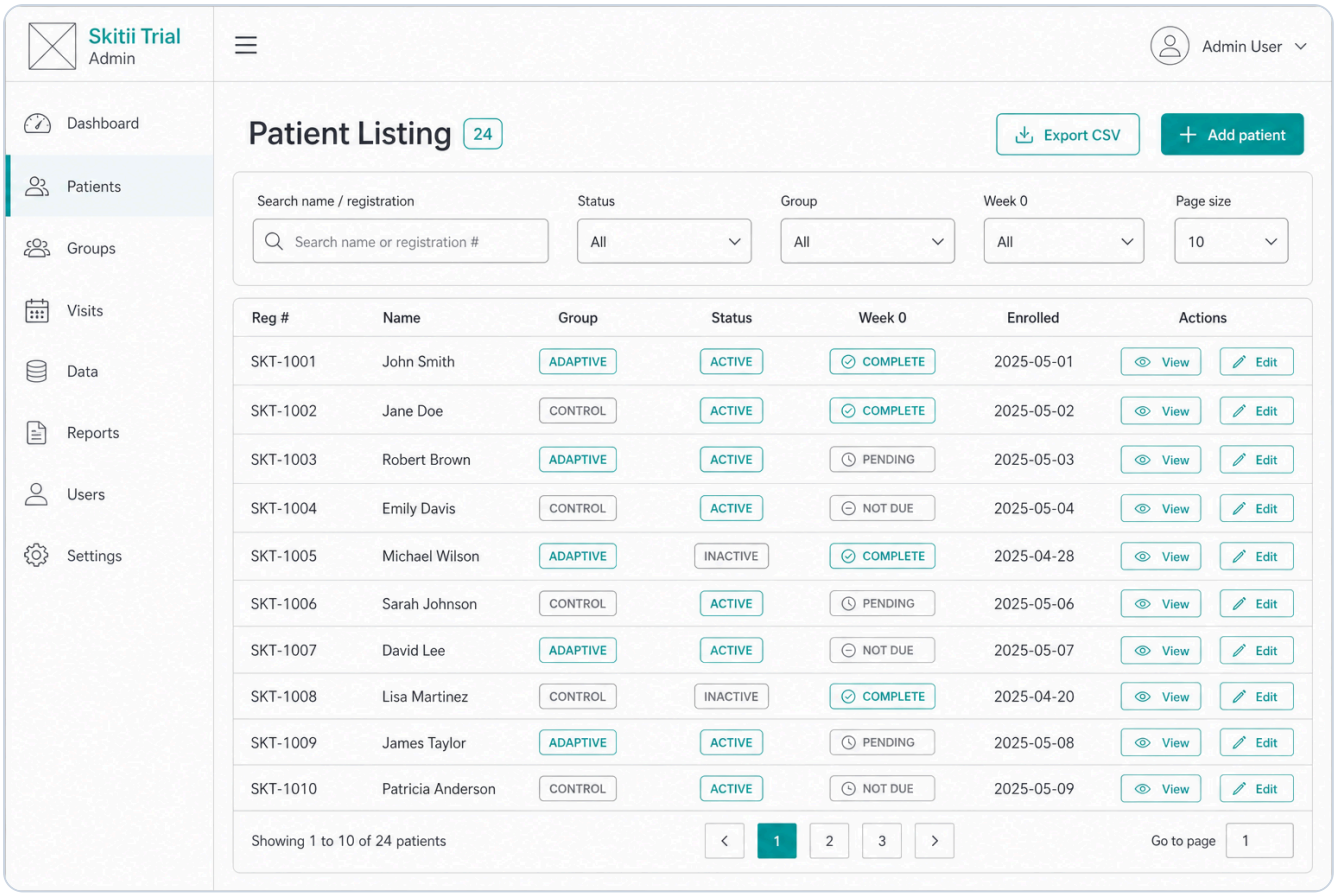

Routes: `/patients` · `/patients/new` · `/patients/[id]` · `/patients/[id]/edit`

Requires institution + trial scope.

Patient list (Read)

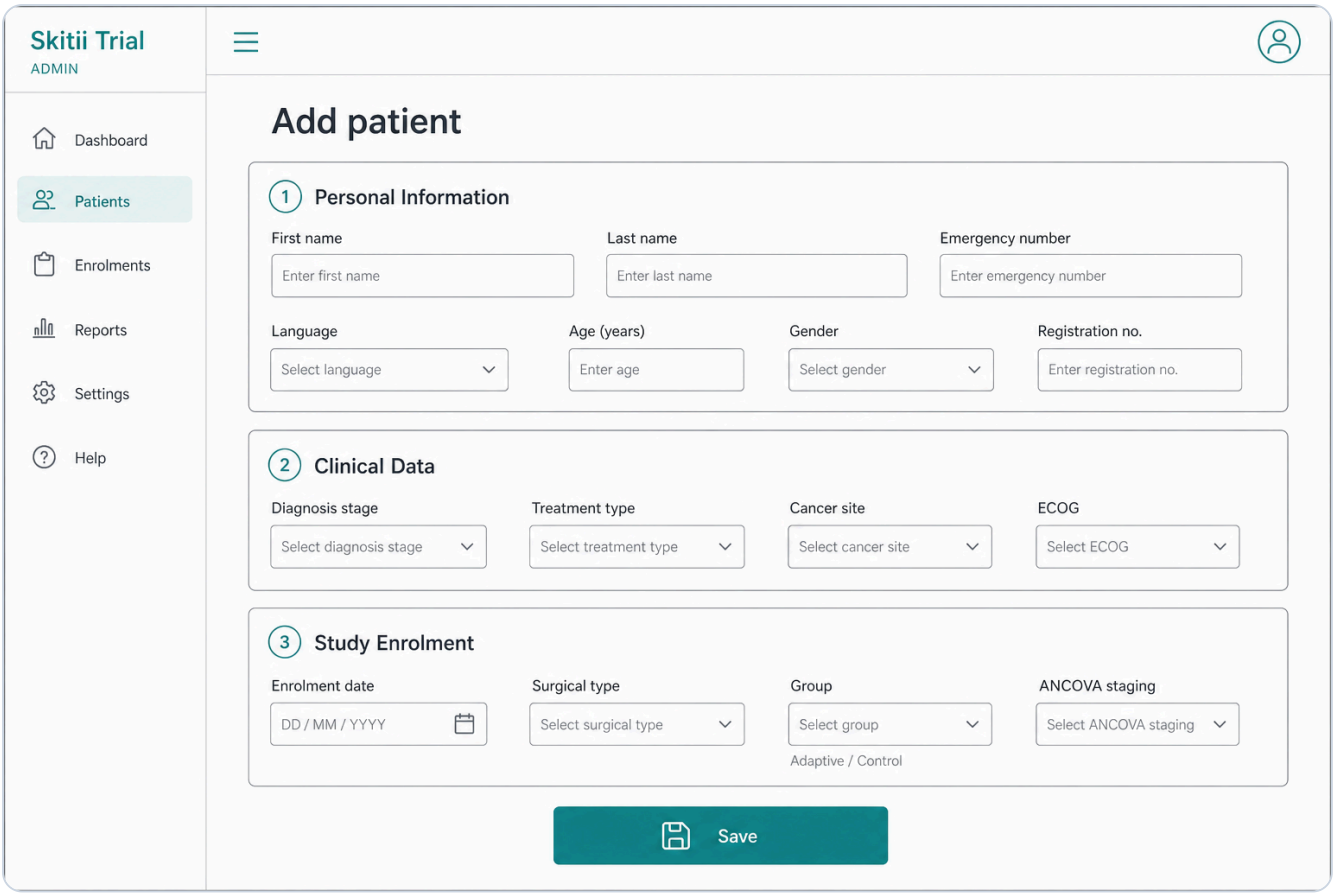

Route: `/patients`

Capability	Detail
Search	Name or registration number
Filters	Status (active / completed / withdrawn) · Group (adaptive / control) · Week 0 status · Page size
Table	Reg # · Name · Group · Status · Week 0 badge · Enrolled date · Actions
Sort	Registration #, name, group, status, enrolment date
Actions	View · Edit · **Add patient** · **Export CSV**

Add patient (Create)

Route: `/patients/new`

Three form sections on one page:

1. **Personal information** — first/last name, emergency number, language, age, gender, registration # (optional)
2. **Clinical data** — diagnosis stage, treatment type, cancer site, ECOG
3. **Study enrolment** — enrolment date, surgical type, group type (adaptive/control), ANCOVA staging

Edit patient (Update)

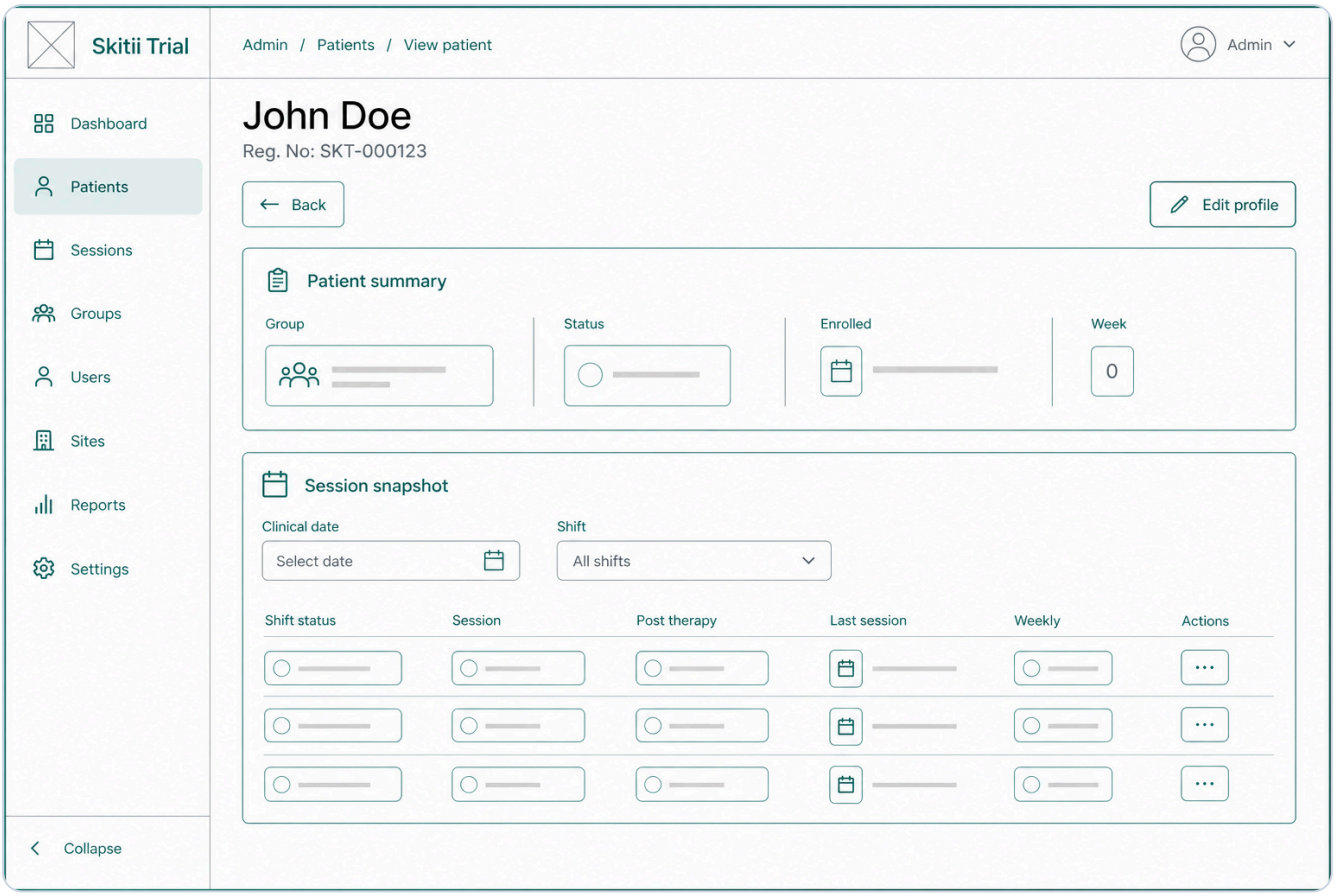

Route: `/patients/[id]/edit`

Same fields as add, plus **status** (active / completed / withdrawn). Shown only when the record is still editable.

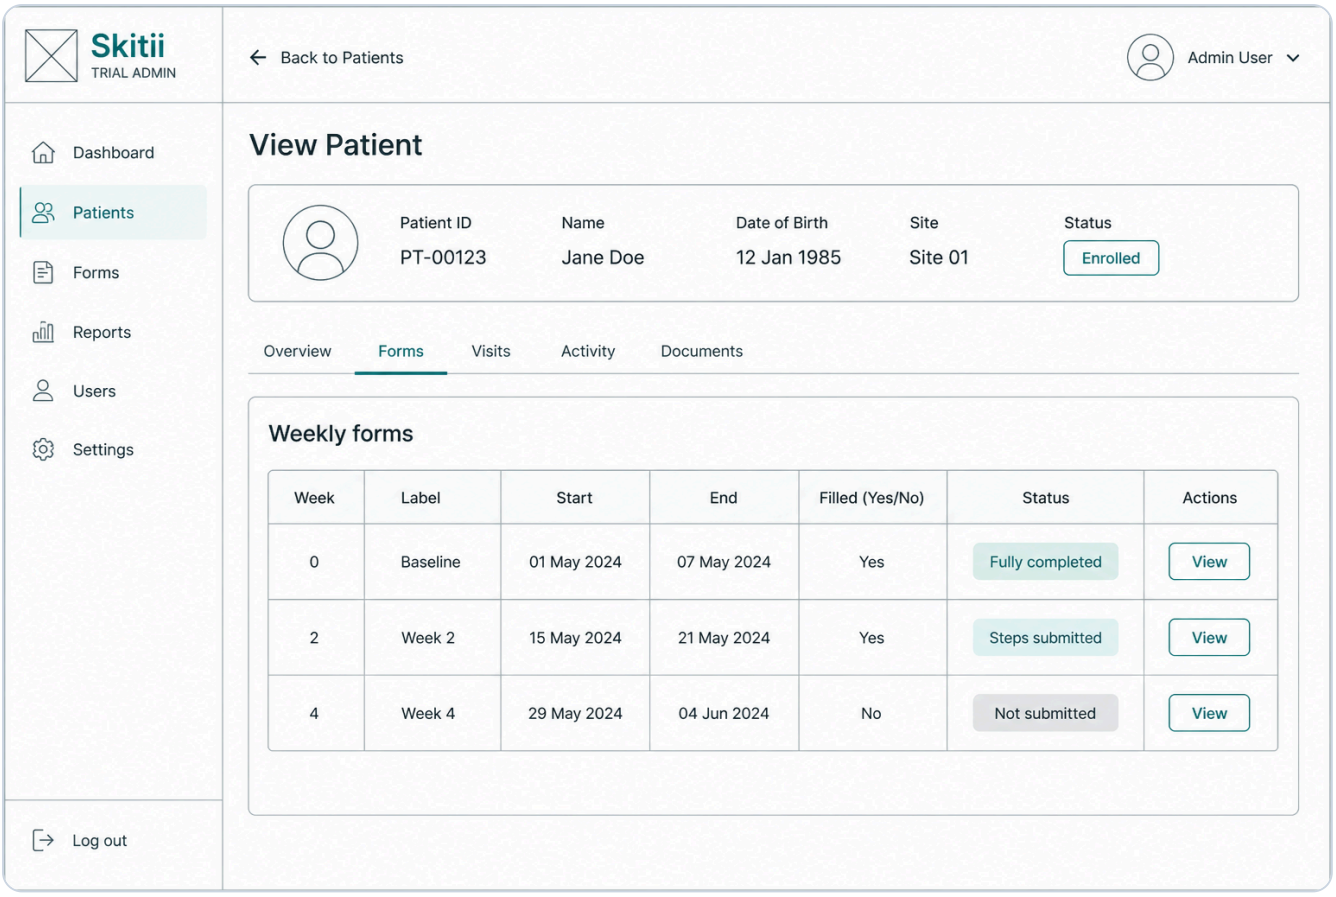

View patient (Read detail)

Route: `/patients/[id]`

Area	Content
Patient summary	Group, status, enrolled date, Week 0 status
Session snapshot	Pick clinical date + shift; chips for shift status, session, post therapy, last session, weekly, actions
Actions	Back to list · Edit profile

Weekly forms schedule (on View patient)

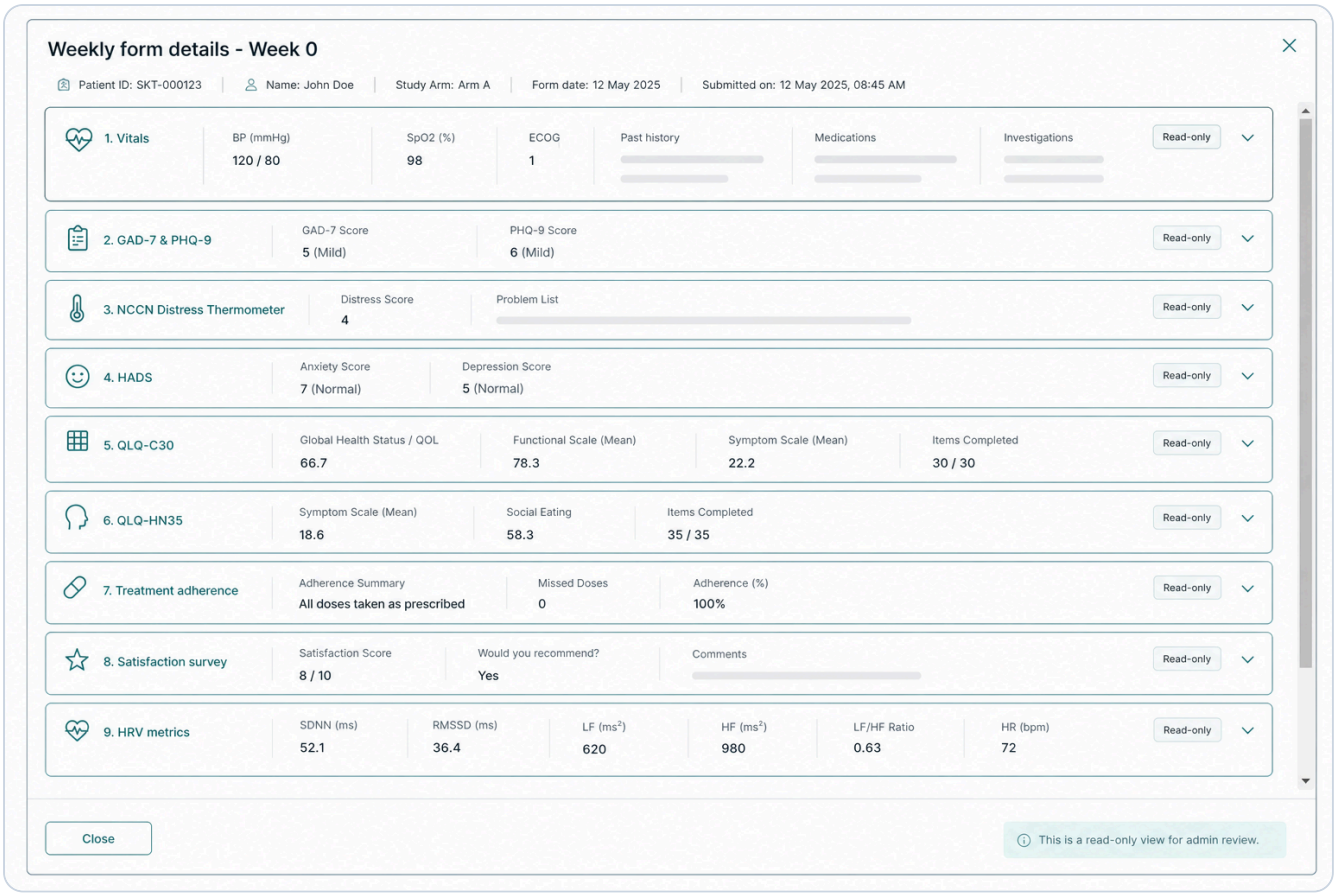

Per-patient schedule from trial `weeklyFormDefinitions`:

Column	Meaning
Week / Label	Study week (0, 2, 4, …) and protocol label
Start / End	Form window dates
Filled	Whether any submission exists
Status	not submitted · steps submitted · fully completed
Actions	**View** opens read-only form detail when `formId` exists

Weekly form detail (read-only review)

Opened from **View** on a submitted week.

Renders only the steps configured for that week. Possible sections:

Step key	Admin sees
`vitals`	Vital signs, past history, current medication, investigations
`gad7_phq9`	GAD-7 and PHQ-9 scores
`nccn_distress`	Distress thermometer + problem checklist
`hads`	HADS-A and HADS-D
`qlq_c30`	EORTC QLQ-C30
`qlq_hn35`	EORTC QLQ-H&N35
`treatment_adherence`	Treatment adherence scale
`satisfaction_survey`	Week-4 satisfaction survey
`hrv`	5-minute resting HRV summary (after steps submitted)

HRV section appears only when the form status allows it (fully completed or HRV data present).

Add / Edit — field reference

1. **Personal information**
   - First name, last name
   - Emergency number, language preference (Kannada / English / Hindi / Malayalam)
   - Age, gender (male / female / other)
   - Patient ID / registration number (optional)
2. **Clinical data**
   - Diagnosis stage (Stage 1–4)
   - Treatment type (Radiotherapy / Chemotherapy / Both)
   - Cancer site
   - ECOG performance status (0–4)
3. **Study enrolment**
   - Enrolment date
   - Surgical type (Pre-Operative / Post-Operative)
   - Group type (adaptive / control)
   - ANCOVA staging (Pre-Treatment / Early / Mid-late)
   - Status (active / completed / withdrawn) on edit

7.2 Sessions

Route: `/sessions`

What we are adding in this module

Screen	What admin can do
List	Paginated therapy sessions for the scoped institute/trial; search; filter by status
Detail (dialog)	Inspect one session without leaving the list

List shows / filters: Active · Completed · Incomplete · Auto-terminated.

Session detail includes

- Patient name, device id, duration, shift, session date, wellbeing
- Termination reason (user ended, timeout, max reached, replaced by new session, ...)
- **Pre-therapy** form snapshot
- **Post-therapy** form snapshot
- **HR / phase readings** panel

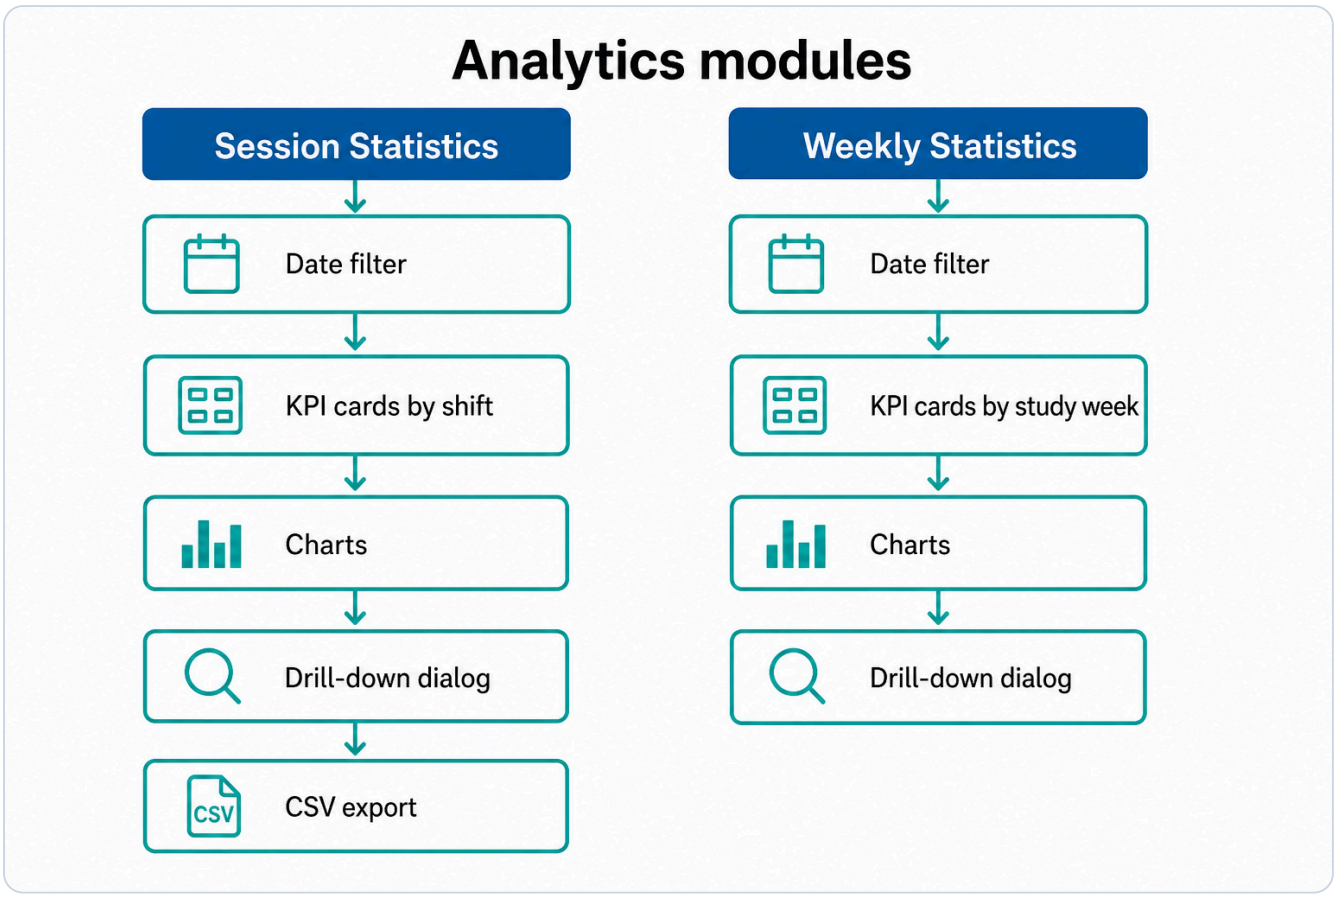

Admins do not start sessions here — that happens on the tablet; this module is for review and audit.

---

8. Analytics

Both pages need institution + trial scope. Shared pattern:

Date range → KPI cards → charts → detailed table → click-through detail dialog

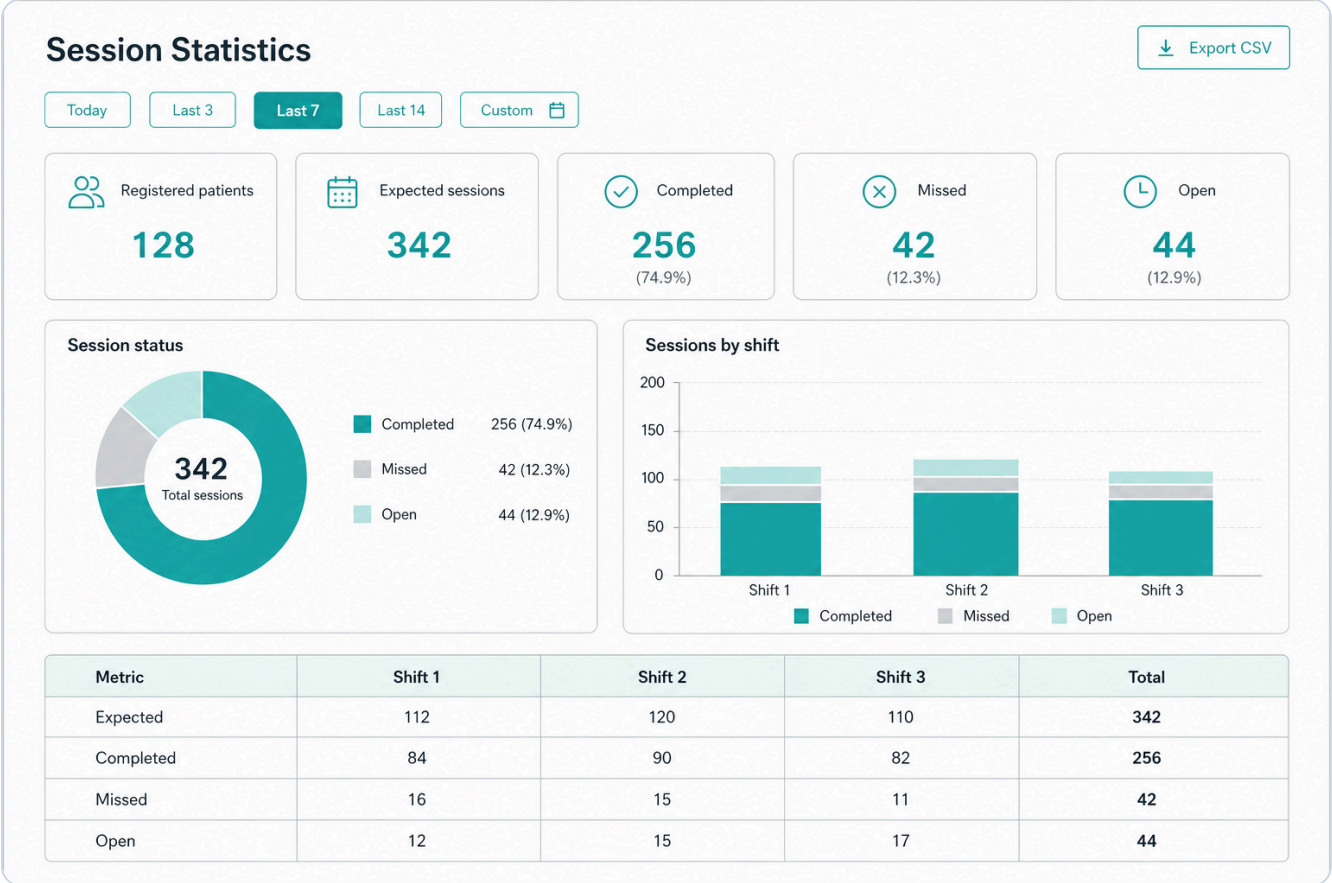

Shared date filter options: Today · Last 3 days · Last 7 days · Last 14 days · Custom range (from / to).
The backend returns the resolved clinical period shown under the filter.

Session ops vs weekly clinical-review compliance are **separate** screens on purpose (different axes: **shift** vs **study week**).

8.1 Session Statistics

Route: `/statistics`

Metric	Shift 1	Shift 2	Shift 3	Total
Expected	112	120	110	**342**
Completed	84	90	82	**256**
Missed	16	15	11	**42**
Open	12	15	17	**44**

Purpose: Enrolment and therapy-session completion for the selected institute + trial.

What we are adding in this module

Area	What admin sees / does
Header action	**Export CSV** of the current statistics period
Date filter	Clinical-day range (today / last N / custom)
Open-items banner	Warns when session slots are still open (window not closed)
KPI cards (clickable)	Registered patients · Expected sessions · Completed · Missed · Open
Chart — Session status	Donut / status split: Completed · Missed · Open
Chart — Sessions by shift	Stacked bars per Shift 1 / 2 / 3 (click segment → details)
Detailed breakdown table	Rows: Expected · Completed · Missed · Open × columns Shift 1 / 2 / 3 / Total
Drill-down dialog	Patient list and session slots for the clicked count (optionally filtered by shift)

KPI meanings

KPI	Meaning
Registered patients	Patients created in the selected period
Expected sessions	Patient × shift slots due in range
Completed	Slots with completed post-therapy (completion rate shown)
Missed	Shift window closed with no post-therapy
Open	Shift window still active (not closed yet)

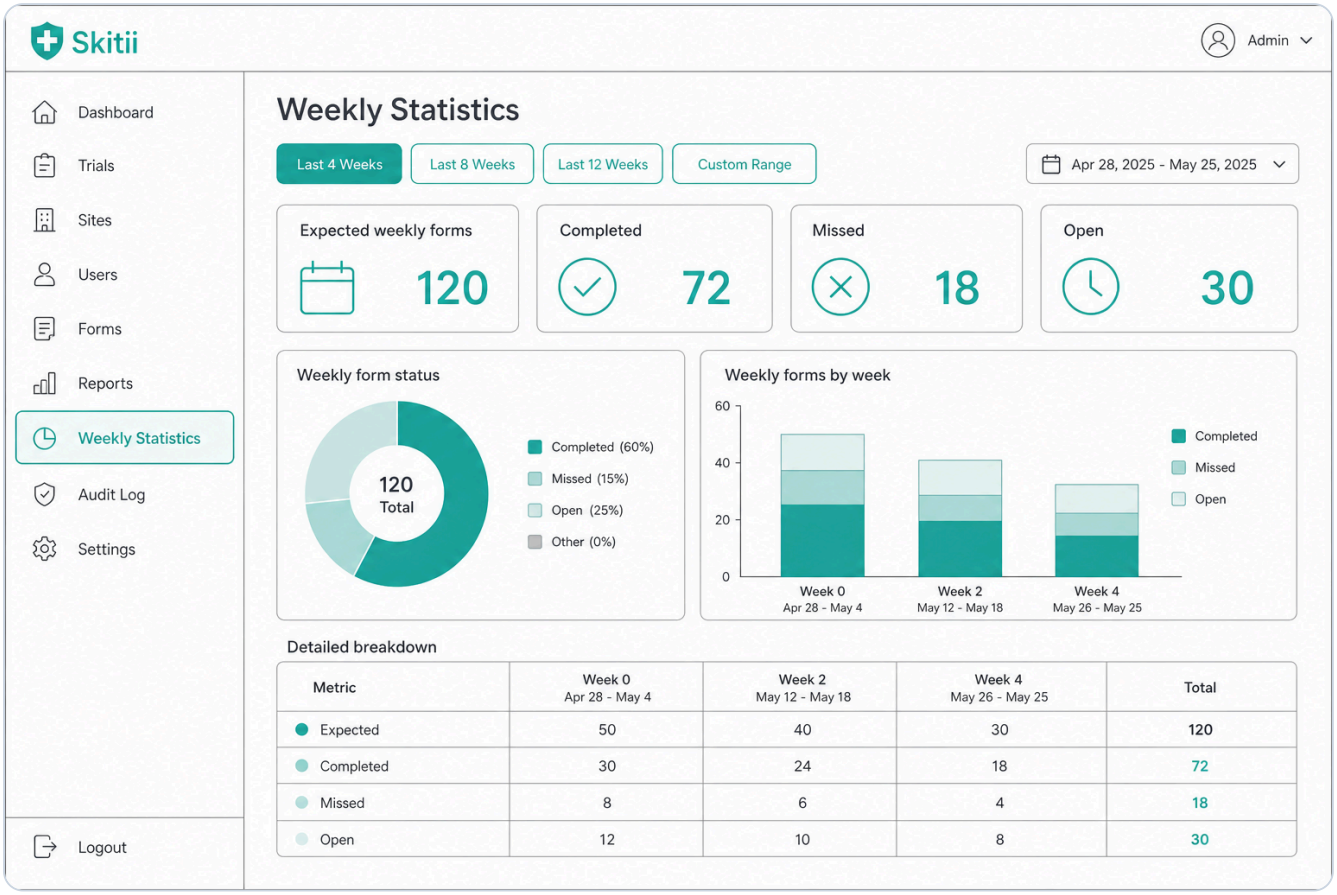

Drill-down detail dialog can show

- For **registered:** patient rows created in range
- For **expected / completed / missed / open:** underlying patient–shift session slots

Missed only applies **after** the shift window closes. Each table row sums to Expected for that shift.

8.2 Weekly Statistics

Route: `/weekly-statistics`

Purpose: Weekly clinical-review form completion (Week 0 / 2 / 4 / … from trial `weeklyFormDefinitions`).

What we are adding in this module

Area	What admin sees / does
Date filter	Same clinical-day presets as session stats
Open-items banner	Warns when weekly form windows are still open
KPI cards (clickable)	Expected weekly forms · Completed · Missed · Open
Chart — Weekly form status	Overall Completed · Missed · Open split
Chart — Weekly forms by week	Stacked bars per study week (Week 0, 2, 4, …)
Detailed breakdown table	Rows: Expected · Completed · Missed · Open × columns per study week + Total
Drill-down dialog	Patients / weekly-form slots for the clicked count (optionally filtered by week)

KPI meanings

KPI	Meaning
Expected weekly forms	Patient × week windows due in range
Completed	Forms fully completed in window (completion rate shown)
Missed	Form window closed and form not fully completed
Open	Form window still active

How it differs from Session Statistics

	Session Statistics	Weekly Statistics
Axis	Therapy **shifts** (1 / 2 / 3)	Study **weeks** from protocol
Unit	Session slots	Weekly clinical-review forms
Export	CSV from page header	Drill-down / charts (same interaction pattern)
Empty state	—	Message if trial has no weekly form definitions

9. Music

Route: `/music`

What we are adding in this module

Area	What admin can do
Catalogue list	Browse control-group music tracks from Trial Backend
Search / filter	Search by title; filter by category (Meditation, Sleep Sounds, Focus Music, Nature Sounds, ...)
Preview player	Play / pause / seek / previous / next in the page

No upload or catalogue CMS here — preview of what control patients hear during sessions.

10. Design principles

1. **Setup vs run** — protocol/mapping rarely; patients/sessions daily
2. **Scope-first** — clinical data always filtered by institute + trial
3. **Dedicated pages for complex forms** — trial and patient create/edit not modal-only
4. **Read-heavy where safe** — institutions list; weekly PIN view/copy not free-edit
5. **Same visual system** — cards, badges, teal brand, light/dark, consistent headers
