APP
Skitii Trial Admin Frontend

1. What this panel is

The **Trial Admin Panel** is the web console for Skitii clinical trials. The first site is **Yenepoya**; the same panel supports additional hospitals later.

Skitii supports patients during cancer treatment with music therapy guided by body signals (heart rate / HRV). The **tablet app** is used in the treatment room. The **admin panel** is used by the central trial team on a laptop or desktop.

Who	Tool	Role
Clinicians / nurses	Tablet app	Enrolment on device, therapy sessions, pre/post forms
Trial admins / ops	This admin panel	Protocol setup, hospital mapping, patients, session review, completion metrics
Leadership / monitors	This admin panel	Dashboards and statistics without using the tablet

Split of work

- The tablet is for **live care** — the therapy session happens there.
- This panel is for **setup and oversight** — protocol configuration, patient records, session review, and reporting.

Clinical data (patients, sessions, statistics) is always scoped by **Institution** (hospital) and **Trial** (protocol).

Screenshot numbers in this document are **demo / seed data**, not live hospital outcomes.

---

2. Sign in

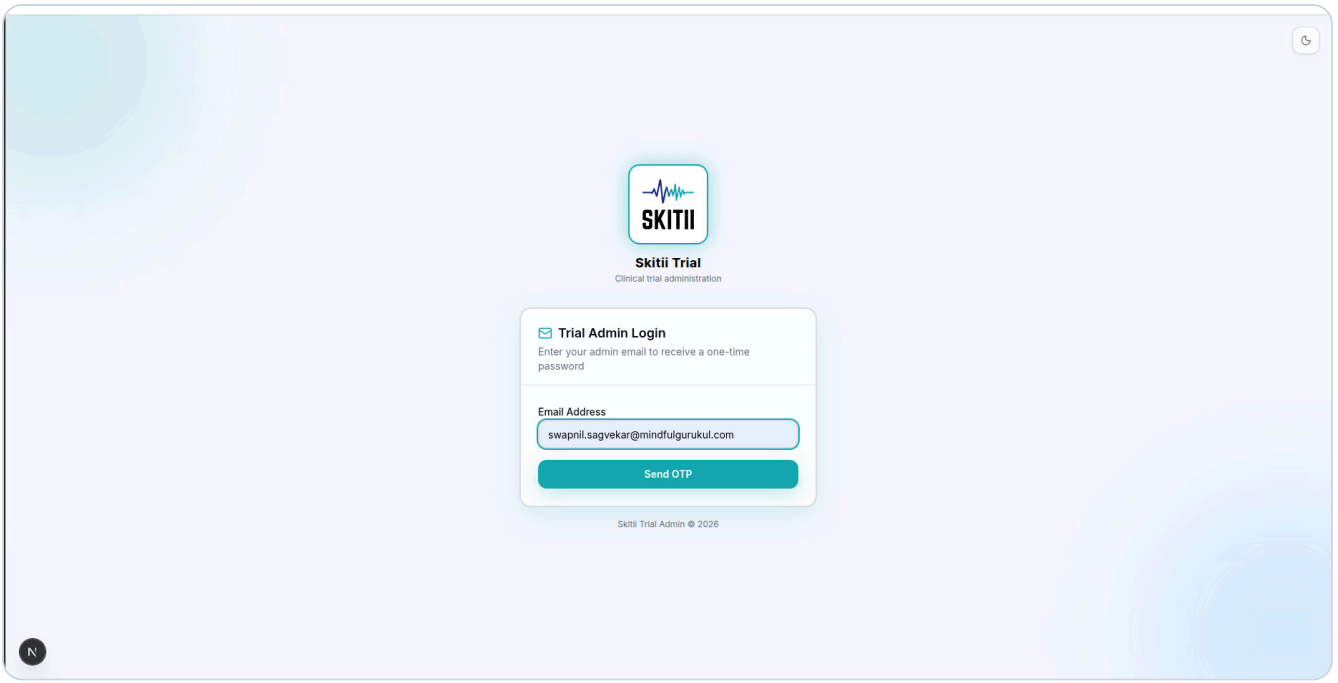

Admins sign in with **email + a one-time 6-digit code** (OTP). There is no password.

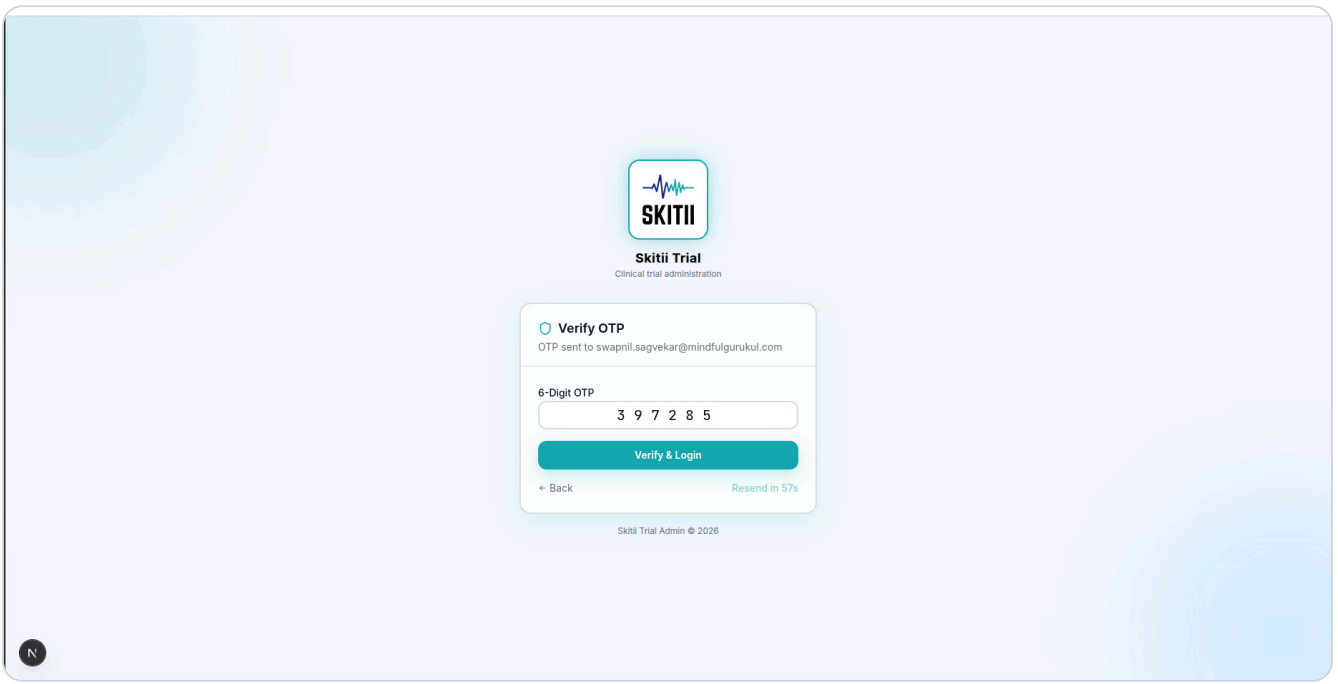

OTP keeps access simple for hospital staff and avoids long-lived passwords for this admin app.

Flow

1. Open the Trial Admin login page.
2. Enter admin email → **Send OTP**.
3. Enter the 6-digit code from email → **Verify & Login**.
4. Dashboard opens after successful verification.

The login screen also supports **Back** (change email) and a resend timer for a new code.

3. Layout — sidebar and scope

Every page uses the same shell.

Left sidebar — modules

Section	Modules	Purpose
—	Dashboard	Overview and shortcuts
Setup	Trials, Institutions, Configurations	Protocol and hospital mapping
Operations	Patients, Sessions	Enrolment and session review
Analytics	Session Statistics, Weekly Statistics	Completion and compliance metrics
—	Music	Control-group track preview

Institution + Trial (scope bar)

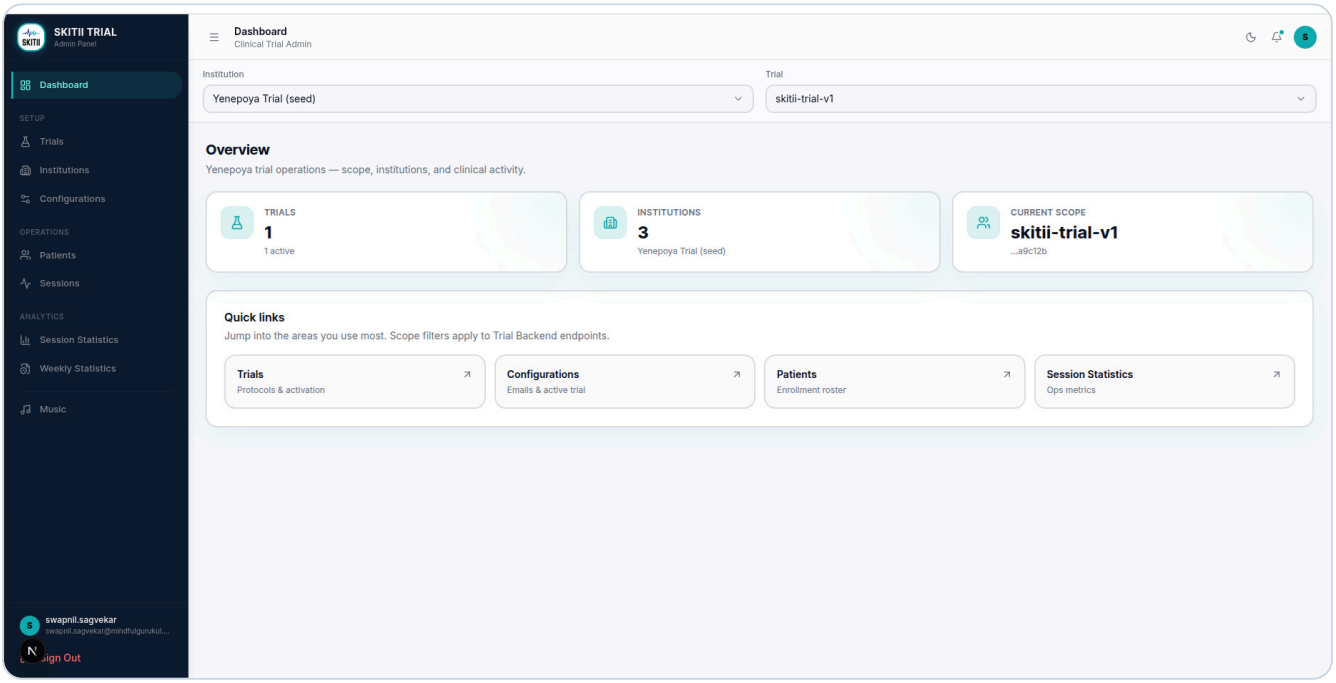

Clinical pages include:

- **Institution** — hospital (e.g. Yenepoya)
- **Trial** — protocol (e.g. skitii-trial-v1)

Patients, Sessions, and both Statistics pages require this scope. The selected scope is kept while moving between pages.

Top bar

Page title, light/dark theme toggle, and sign out. The signed-in user also appears at the bottom of the sidebar.

4. Dashboard

The Dashboard is the **home page** — overview only, no create/edit forms.

Contents

- **Trials** count — total protocols and how many are active
- **Institutions** count — linked trial hospitals
- **Current scope** — selected Institution + Trial
- **Quick links** — Trials, Configurations, Patients, Session Statistics

---

5. Setup — Trials

A **trial** is the study protocol. It defines:

- Study duration (weeks)
- Therapy shifts per day and their time windows
- Which study weeks collect weekly clinical forms, and which questionnaire steps each week includes

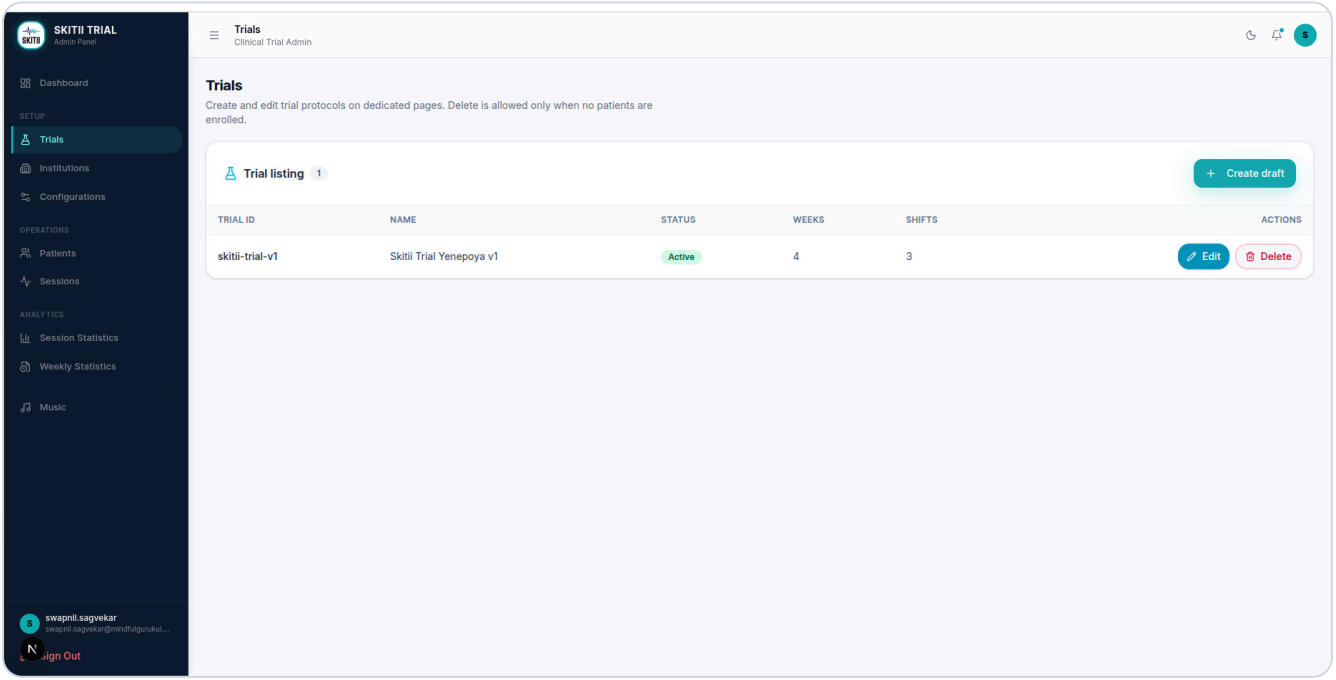

Patients and sessions follow these protocol rules.

Trial list

All protocols appear with a status badge: **active**, **inactive**, or **completed**.

Available actions:

- **Create draft** — new protocol
- **Edit** — update an existing trial
- **Delete** — only when no patients are enrolled

Create / edit trial — basics and shifts

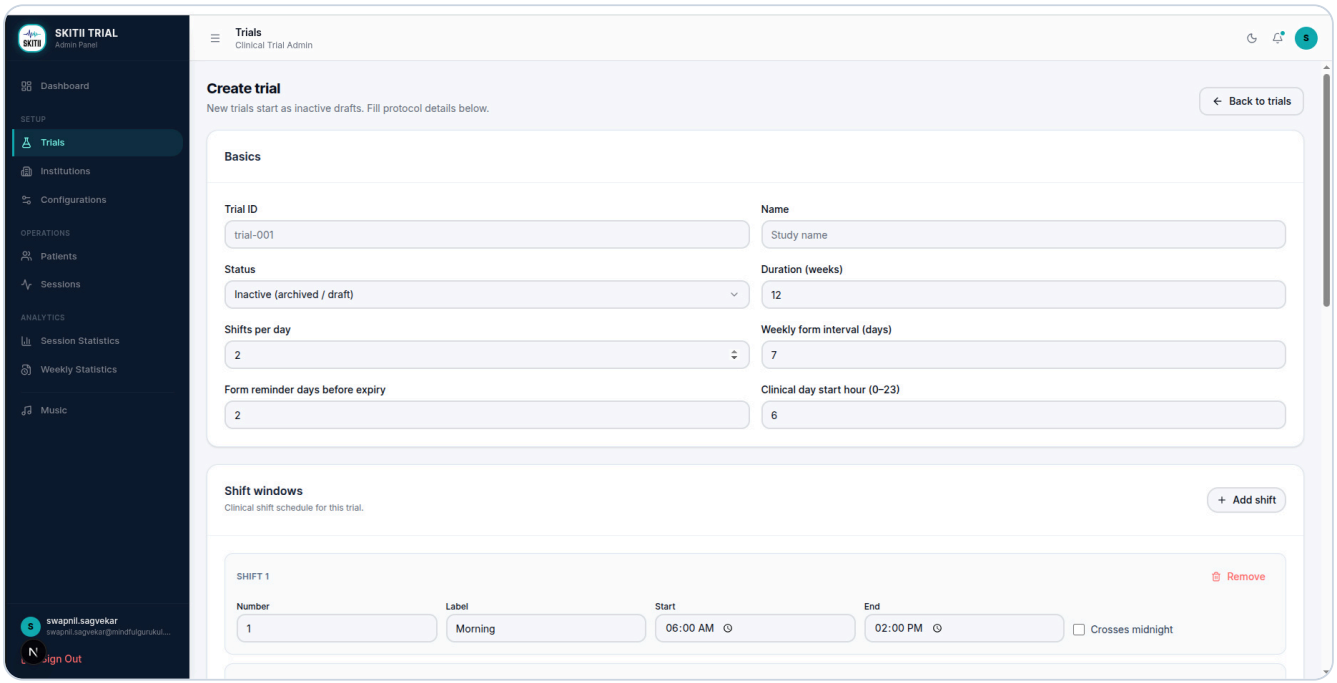

Basics

- Trial ID (on create), name, status
- Duration in weeks
- Shifts per day
- Weekly form interval (days between form weeks)
- Reminder days before a form window expires
- Clinical-day start hour (when the clinical day begins)

Shift windows (repeatable rows)

- Shift number and label (e.g. Morning, Evening)
- Start time and end time
- Whether the shift crosses midnight

These windows feed Session Statistics (Expected / Completed / Missed / Open by shift).

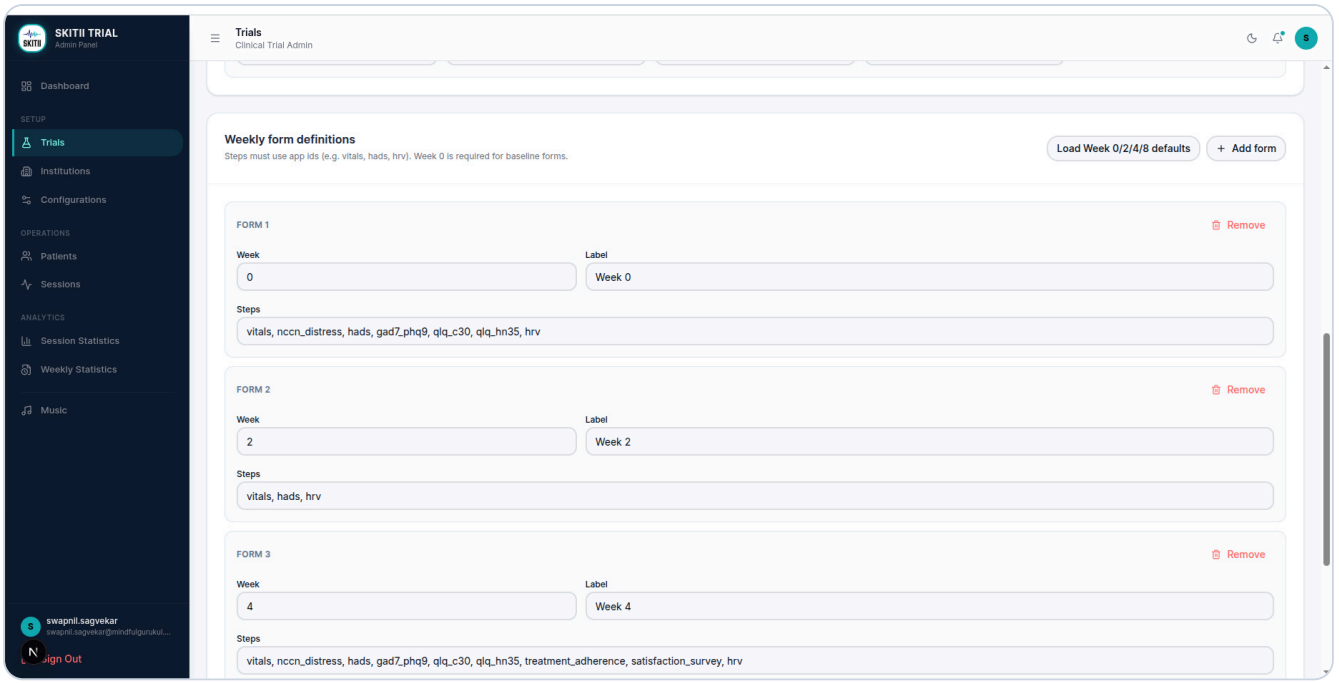

Create / edit trial — weekly form weeks

Weekly form definitions list each study week (e.g. Week 0, 2, 4, 8) and the steps collected that week.

Example steps: vitals, NCCN distress, HADS, GAD-7 / PHQ-9, QLQ-C30, QLQ-HN35, treatment adherence, satisfaction survey, HRV.

The tablet and admin panel both use this list, so form content stays aligned with the protocol.

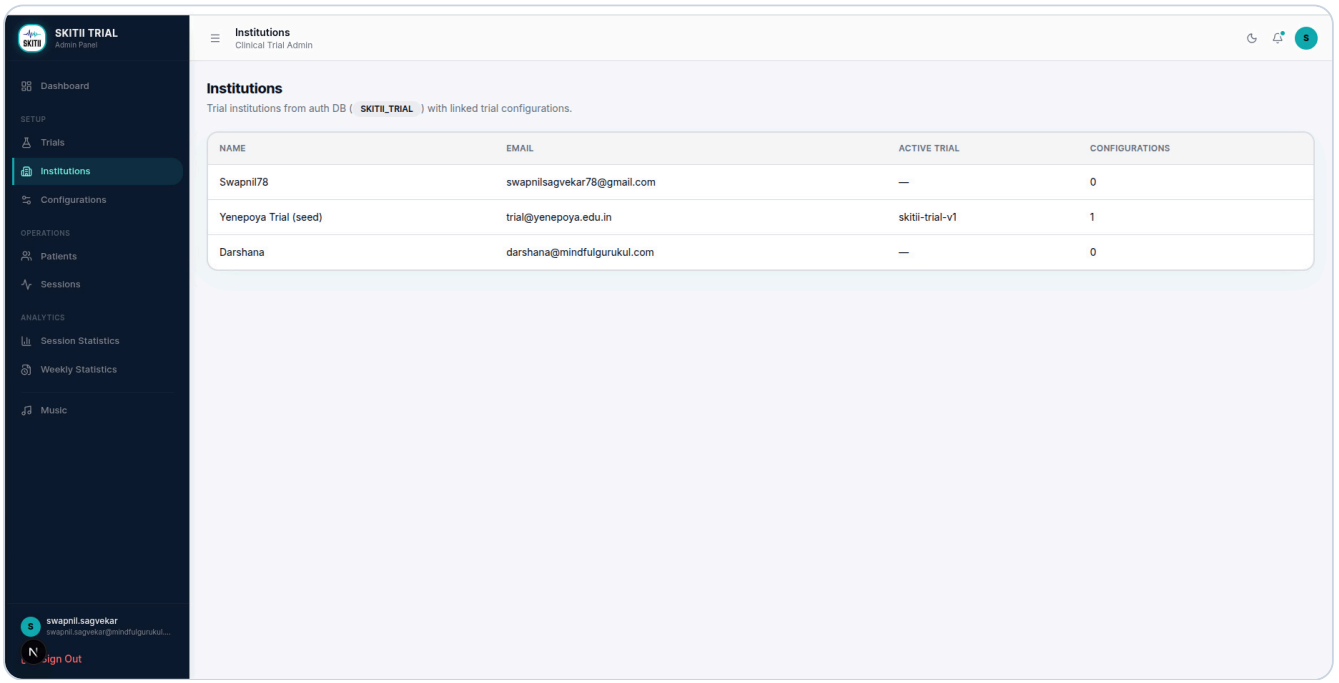

6. Setup — Institutions

Institutions are the hospitals in the trial. This page is a **read-only list** from the auth system.

Columns

- Name
- Email
- Active trial
- Number of configurations (hospital↔trial links)

Hospital master records are not created or edited here (that stays in product / auth). Linking a hospital to a protocol is done under **Configurations**.

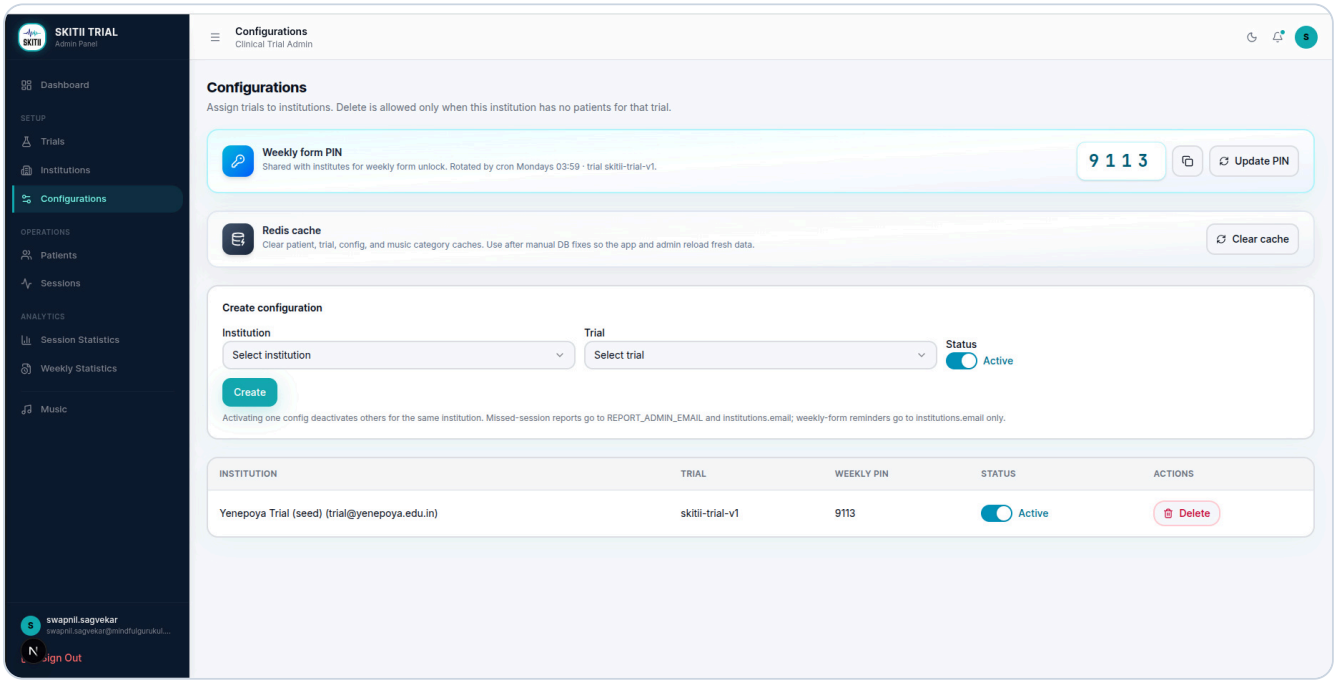

7. Setup — Configurations

Configurations connect **which hospital runs which protocol**, and expose the **weekly form PIN** for institute staff.

Page areas

1. **Weekly form PIN**
   - Current 4-digit PIN for the active trial
   - **Copy** for sharing with hospital staff (tablet weekly-form unlock)
   - **Generate / Update PIN**
   - Scheduled rotation also updates the PIN (e.g. Mondays early morning)
2. **Clear cache**
   - Clears Redis caches for patients, trials, configs, and music
   - Used after manual database fixes so apps reload fresh data
3. **Create / manage mappings**
   - Institution + Trial, with active flag
   - Table of existing hospital↔trial links (toggle active/inactive or remove)

Protocol definition stays under **Trials**; hospital assignment stays under **Configurations**.

8. Operations — Patients

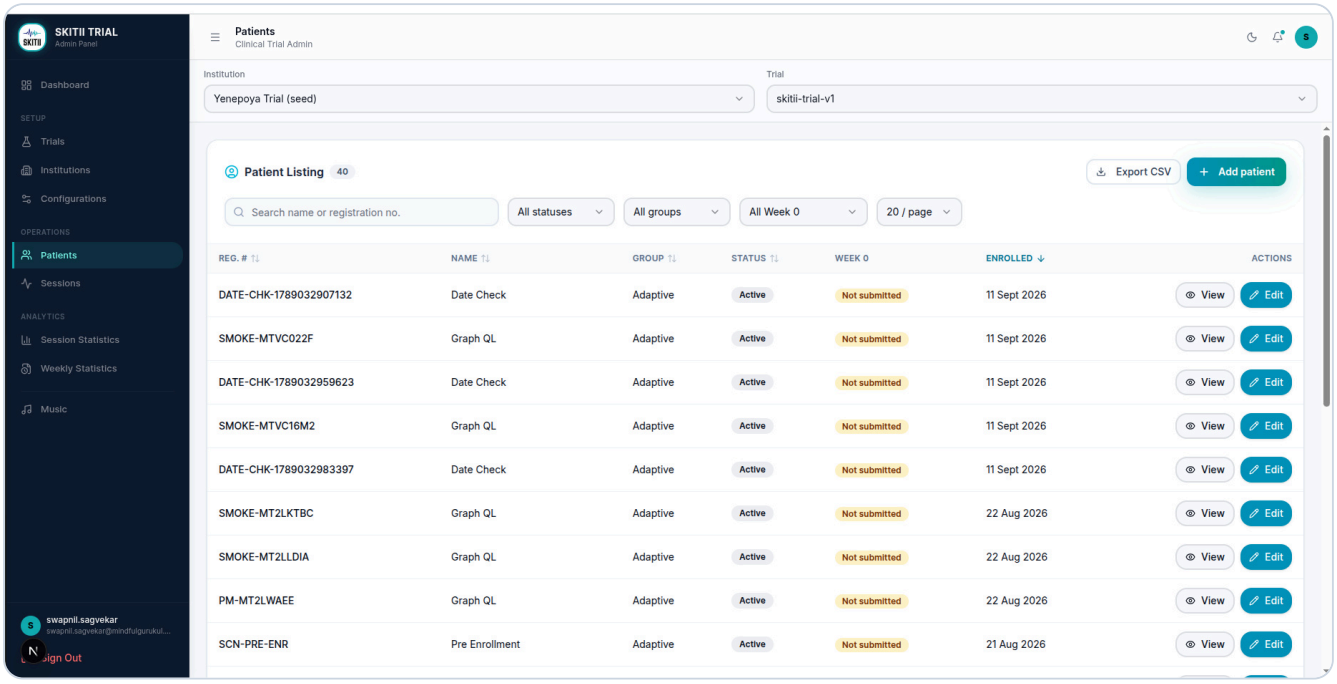

Patients covers enrolment and clinical review for the selected Institution + Trial.

Patient list

Roster for the current scope.

Capabilities

- Search by name or registration number
- Filter by status (active / completed / withdrawn), group (adaptive / control), Week 0 status
- Sort columns
- **Export CSV**
- **View**, **Edit**, or **Add patient**

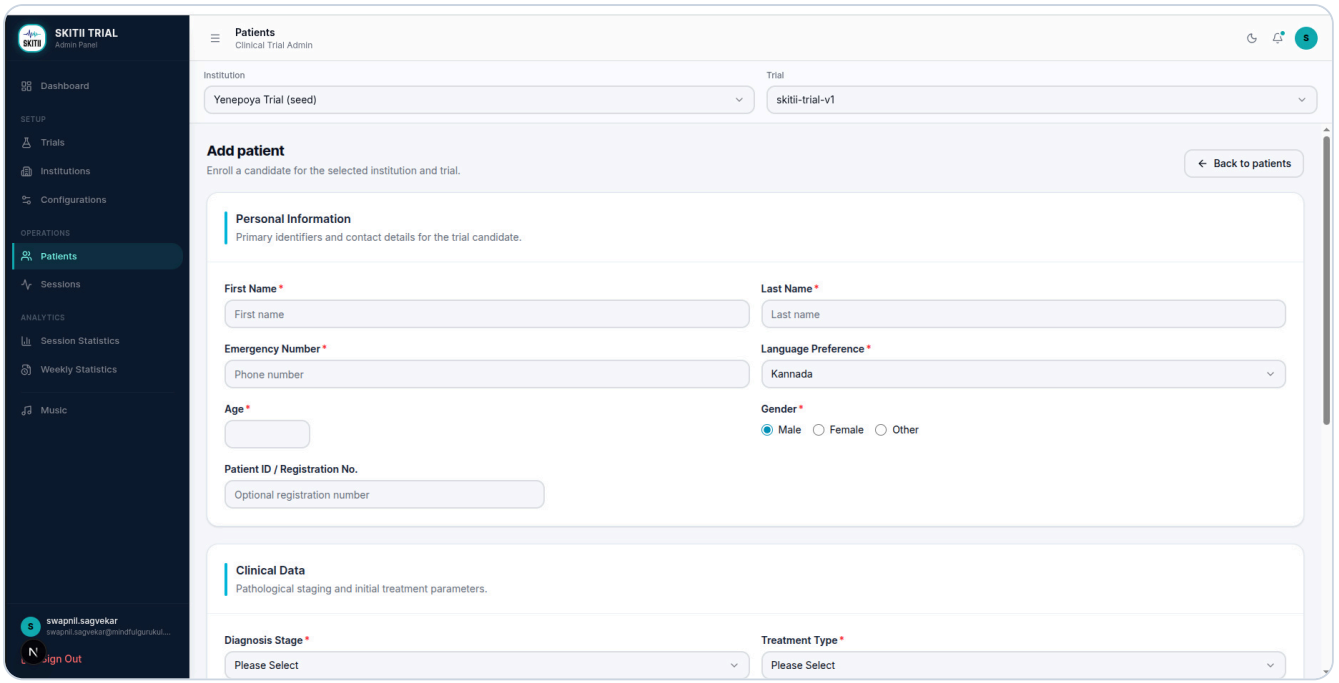

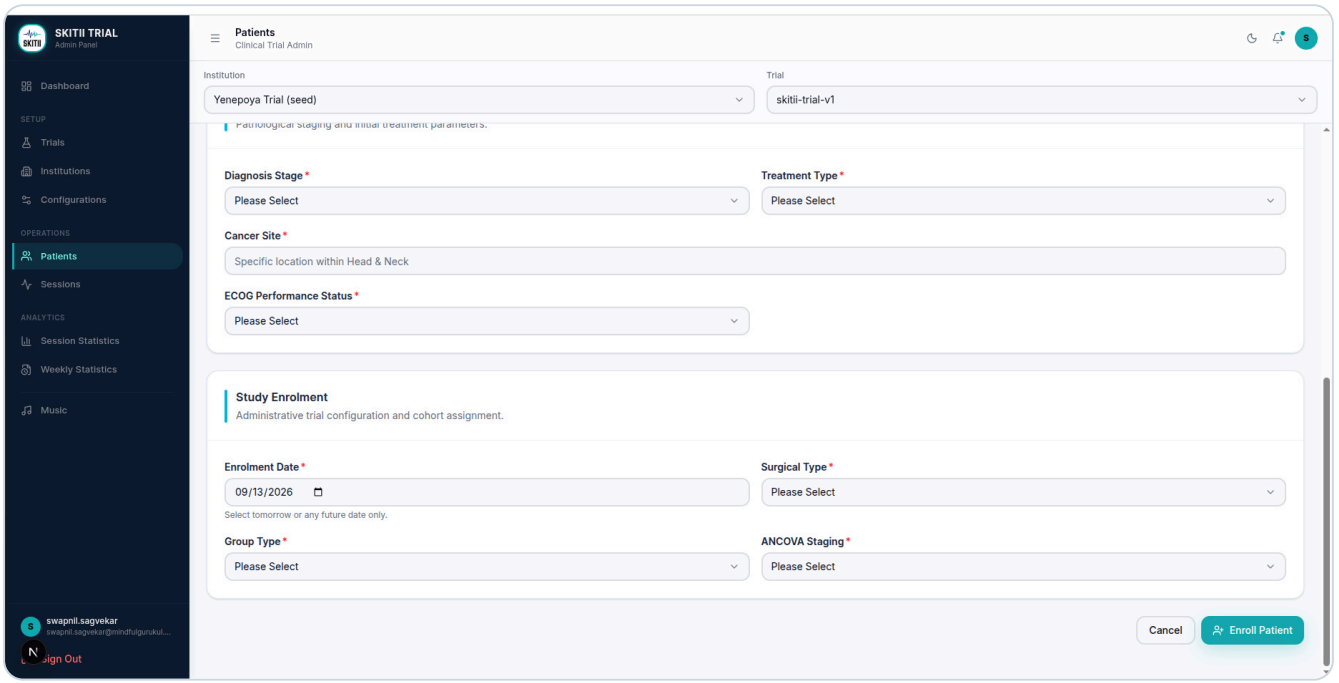

Add patient

New enrolment is one page with three sections:

1. **Personal information** — first/last name, emergency number, language (e.g. English / Kannada / Hindi / Malayalam), age, gender, optional registration number
2. **Clinical data** — diagnosis stage, treatment type (radio / chemo / both), cancer site, ECOG performance status
3. **Study enrolment** — enrolment date, surgical type (pre/post-operative), group type (**adaptive** vs **control**), ANCOVA staging

Adaptive patients follow the adaptive therapy path; control patients use the control music pool.

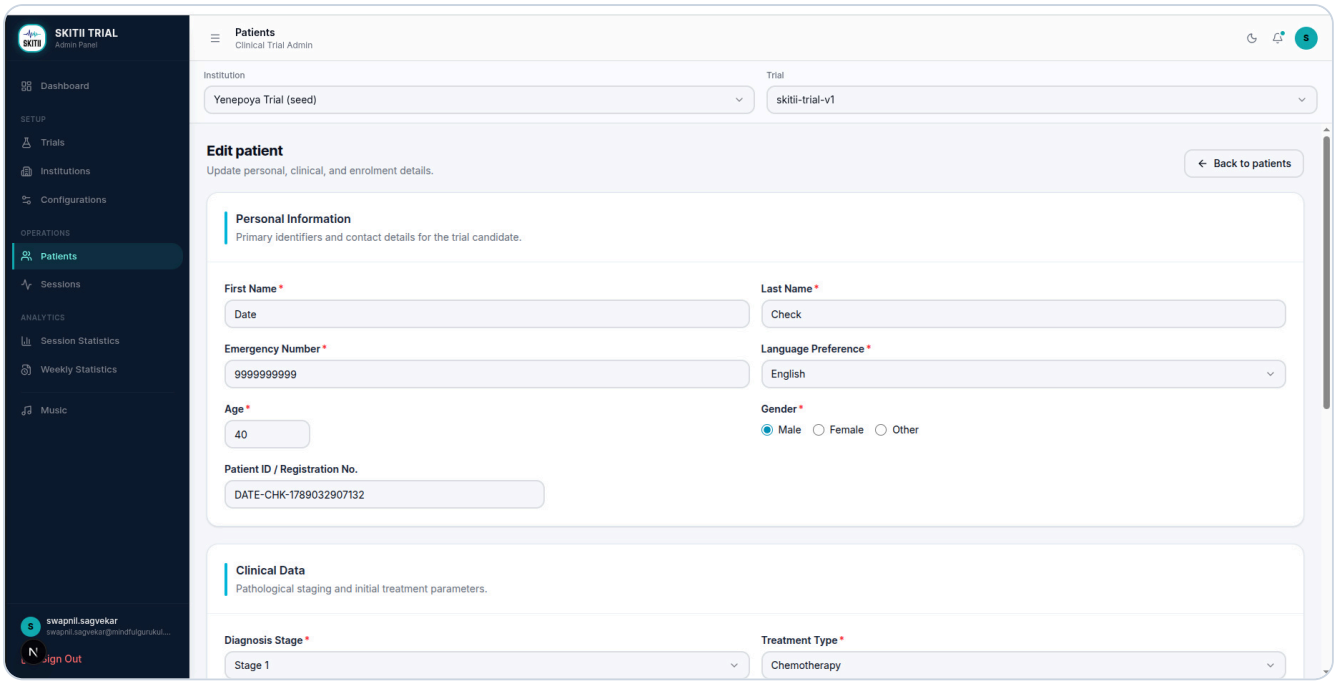

Edit patient

Same fields as add, plus **status**:

- **Active** — on study
- **Completed** — finished the protocol
- **Withdrawn** — left the study

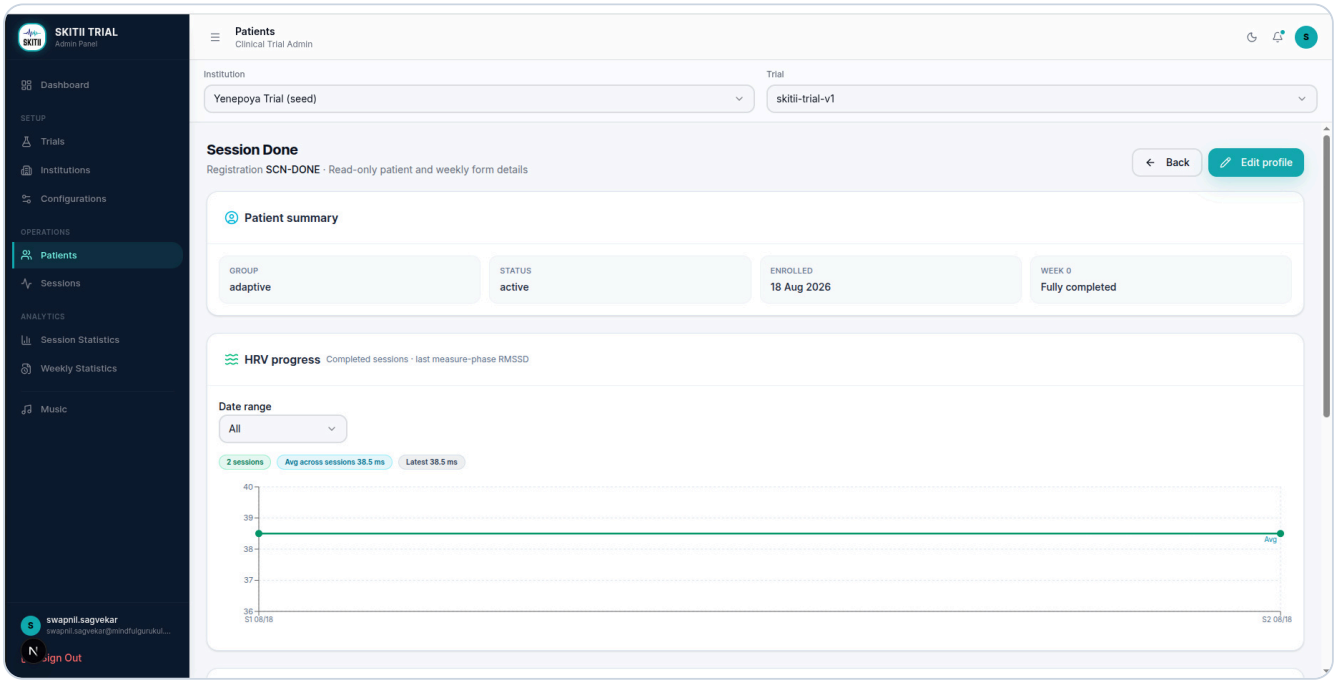

View patient

Read-only patient overview.

Contents

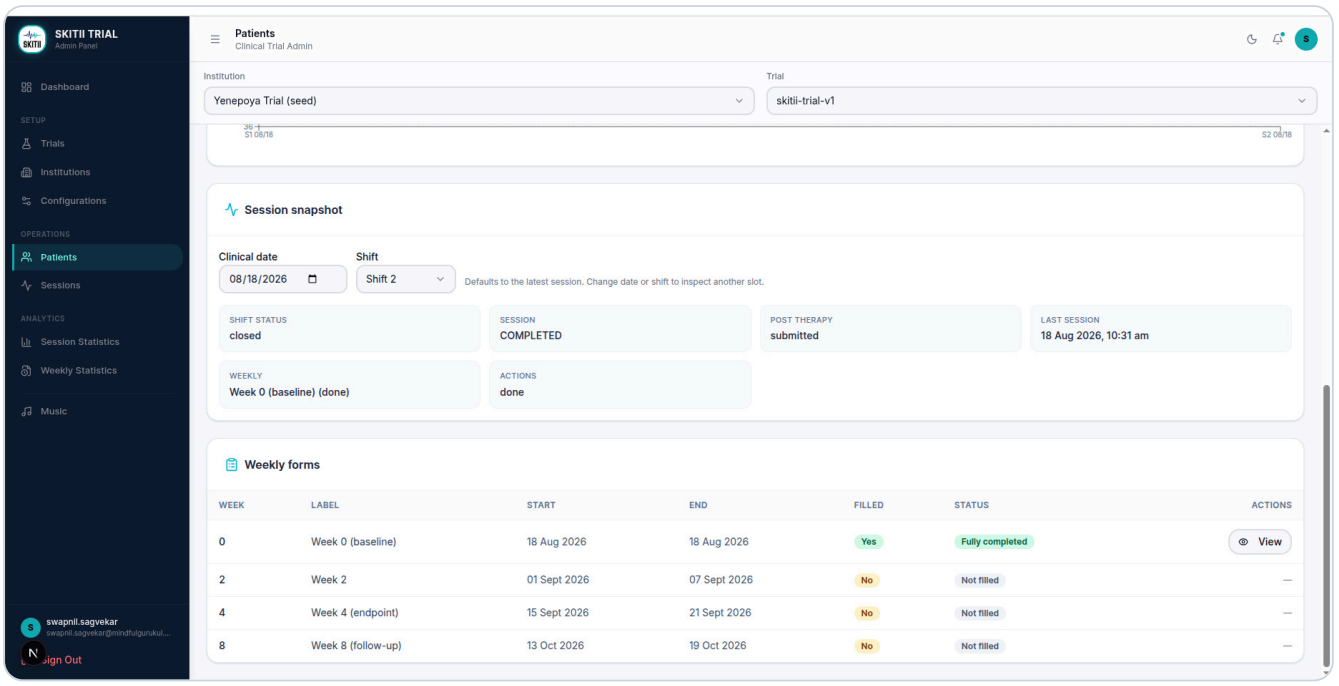

- Summary — group, status, enrolled date, Week 0 status
- **HRV progress** chart
- **Session snapshot** for a clinical date + shift
- Actions — back to list, edit profile

Weekly forms schedule lists every study week from the trial definition:

- Week label and window dates

- Whether a form was filled
- Status (not submitted / steps submitted / fully completed)
- **View** opens the submitted form when available

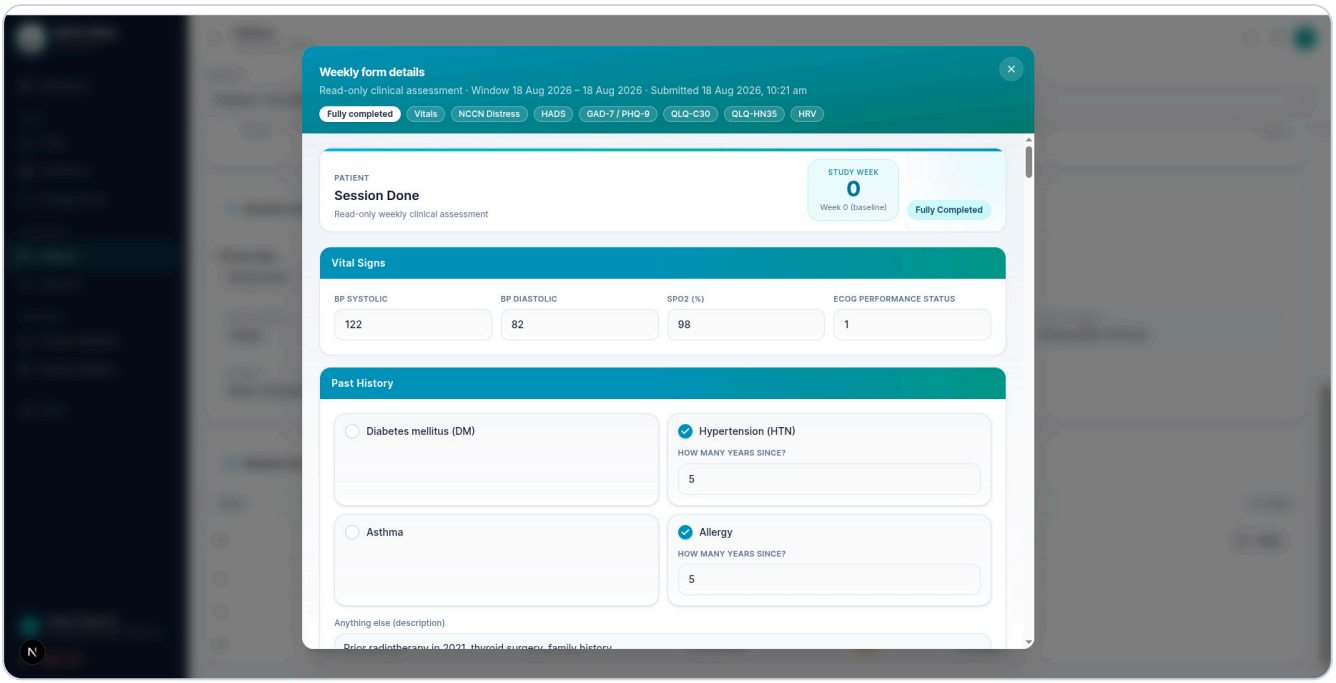

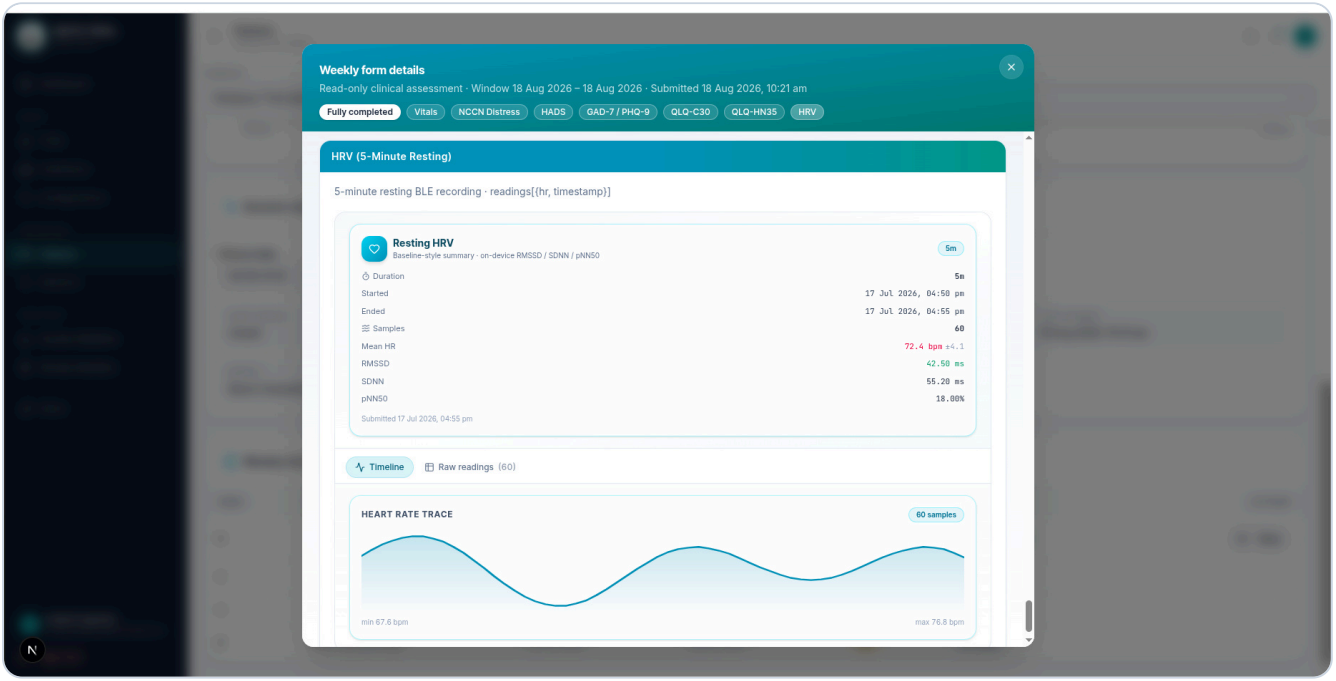

Weekly form detail (read-only)

Opened from the schedule. Admins review tablet submissions; forms are not filled in the admin panel.

Tabs show only the steps configured for that week:

Step	Content
Vitals	Blood pressure, pulse, history, medication, investigations
HADS / GAD-7 / PHQ-9	Anxiety and depression scores
NCCN distress	Distress thermometer and problem list
QLQ-C30 / QLQ-HN35	Quality-of-life questionnaires
HRV	5-minute resting HRV summary and heart-rate trace

9. Operations — Sessions

Sessions is for **audit and review**. Therapy is started on the tablet; this page shows recorded sessions.

Session list

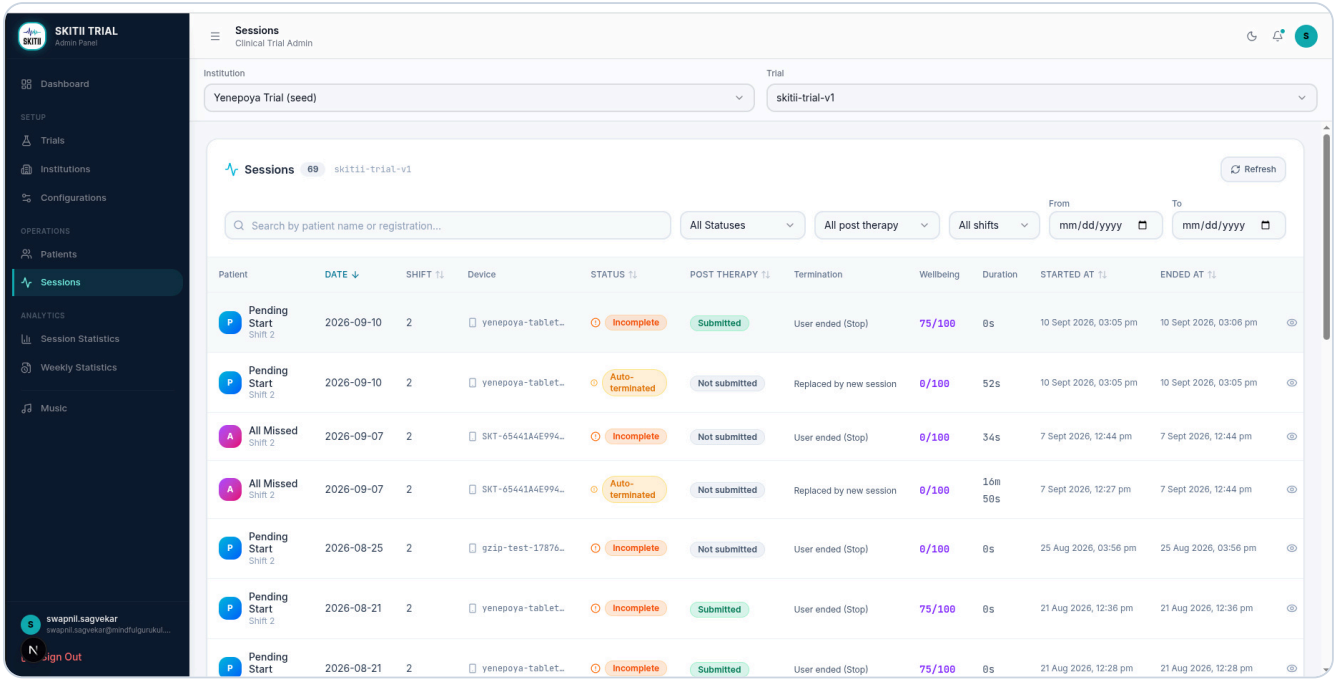

Paginated list for the current Institution + Trial.

Status values

- Active — session still running
- Completed — finished normally
- Incomplete — stopped without a clean completion

- Auto-terminated — ended by the system (timeout, replaced by a new session, etc.)

Search and open any row for full detail.

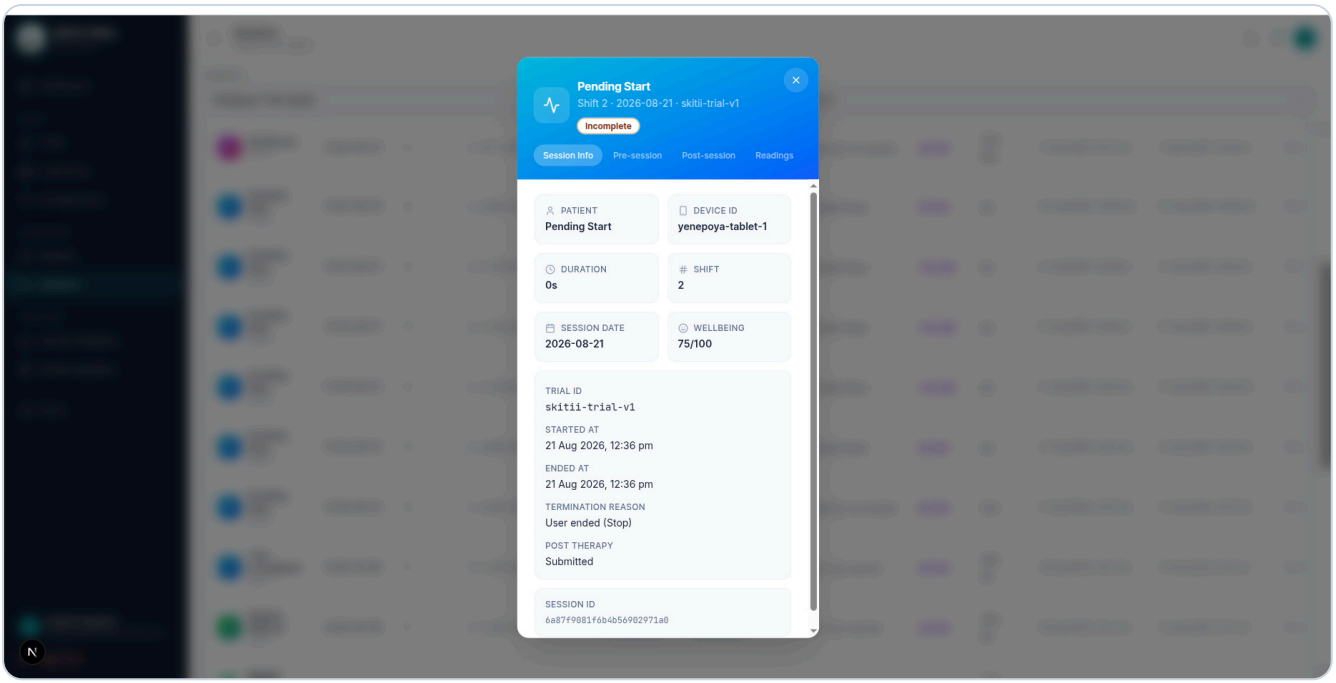

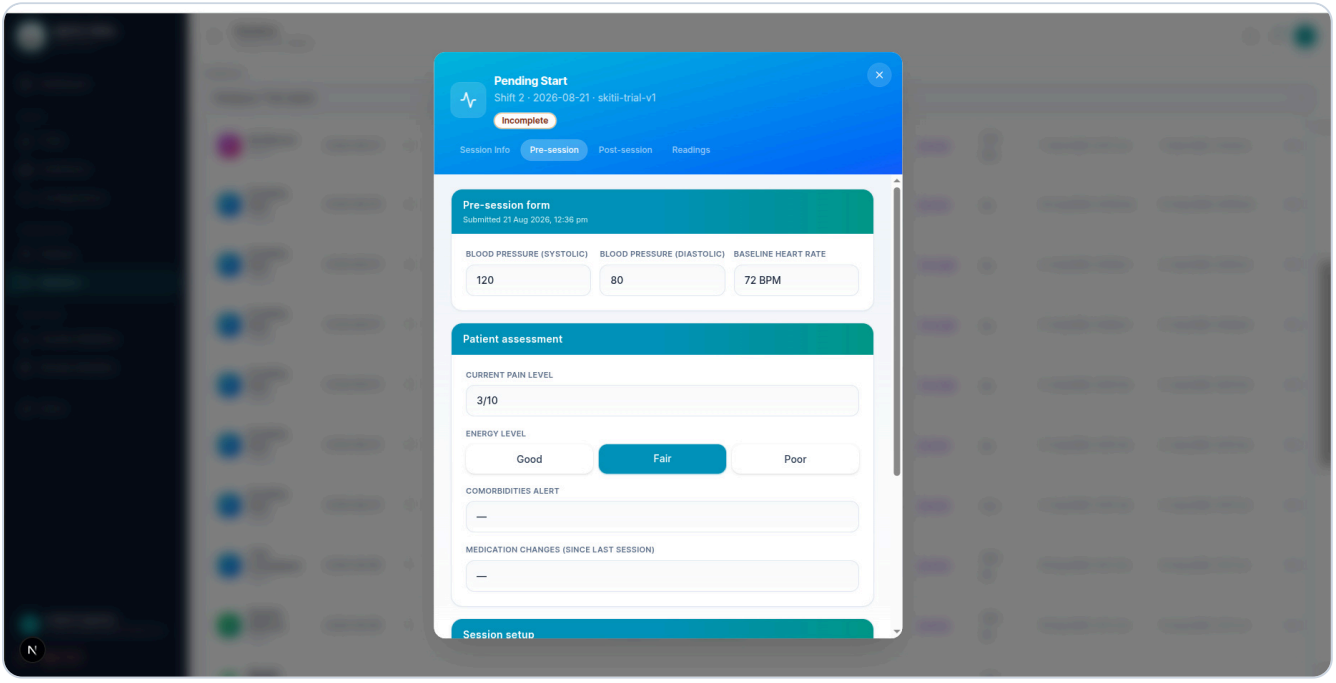

Session detail

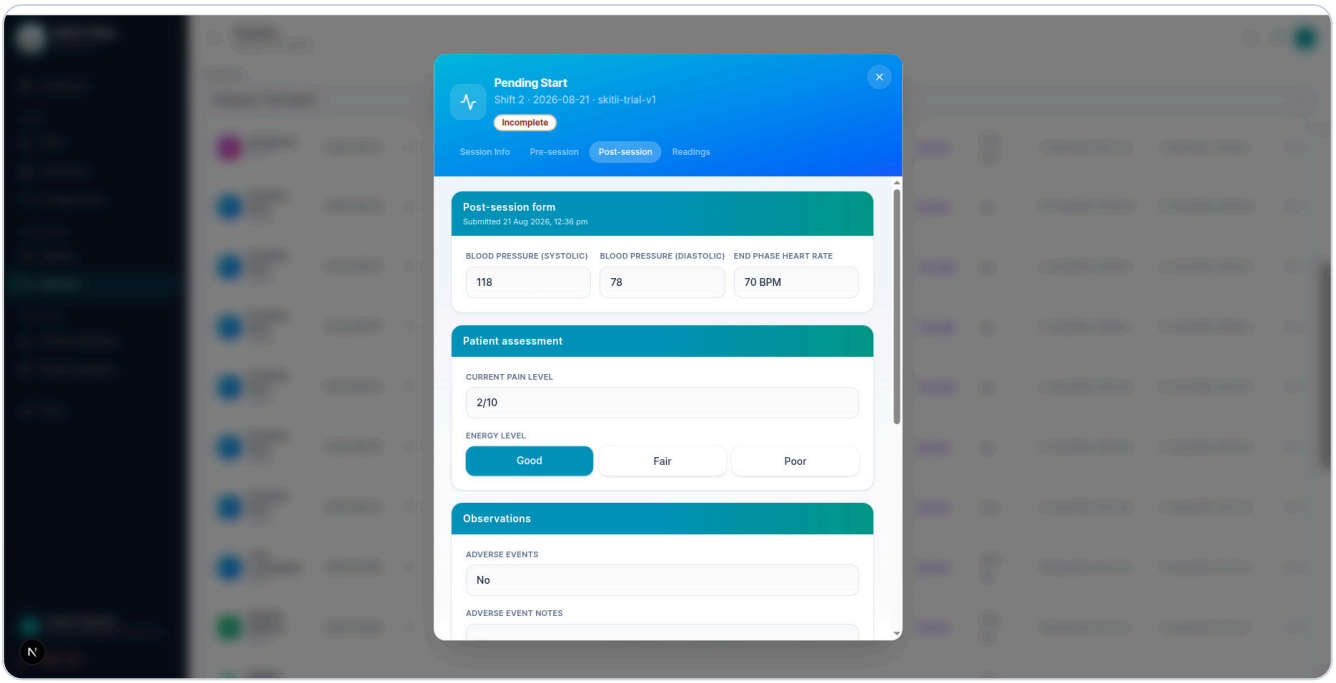

Detail view with tabs:

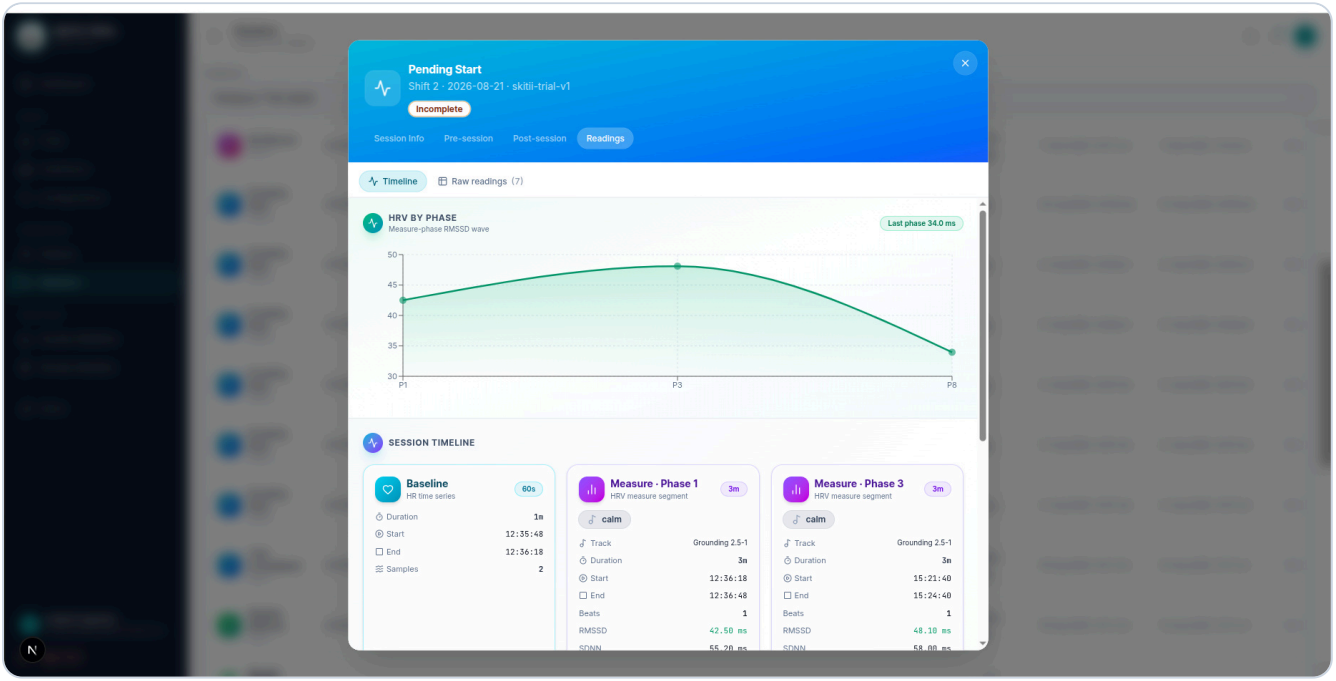

Tab	Content	Use
Session Info	Patient, device id, duration, shift, date, wellbeing, termination reason	Context and end reason
Pre Therapy	Form answers before therapy	Visit baseline
Post Therapy	Form answers after the session	Completion signal for statistics
Session Readings	Heart-rate / phase chart during the session	Physiological trace

Session start is not available in admin — only on the tablet.

10. Analytics — Session Statistics

Session Statistics shows whether **therapy shifts are completing as planned** for the selected Institution + Trial.

Date range options: Today, last 3 / 7 / 14 days, or custom. The resolved clinical period is shown under the filter.

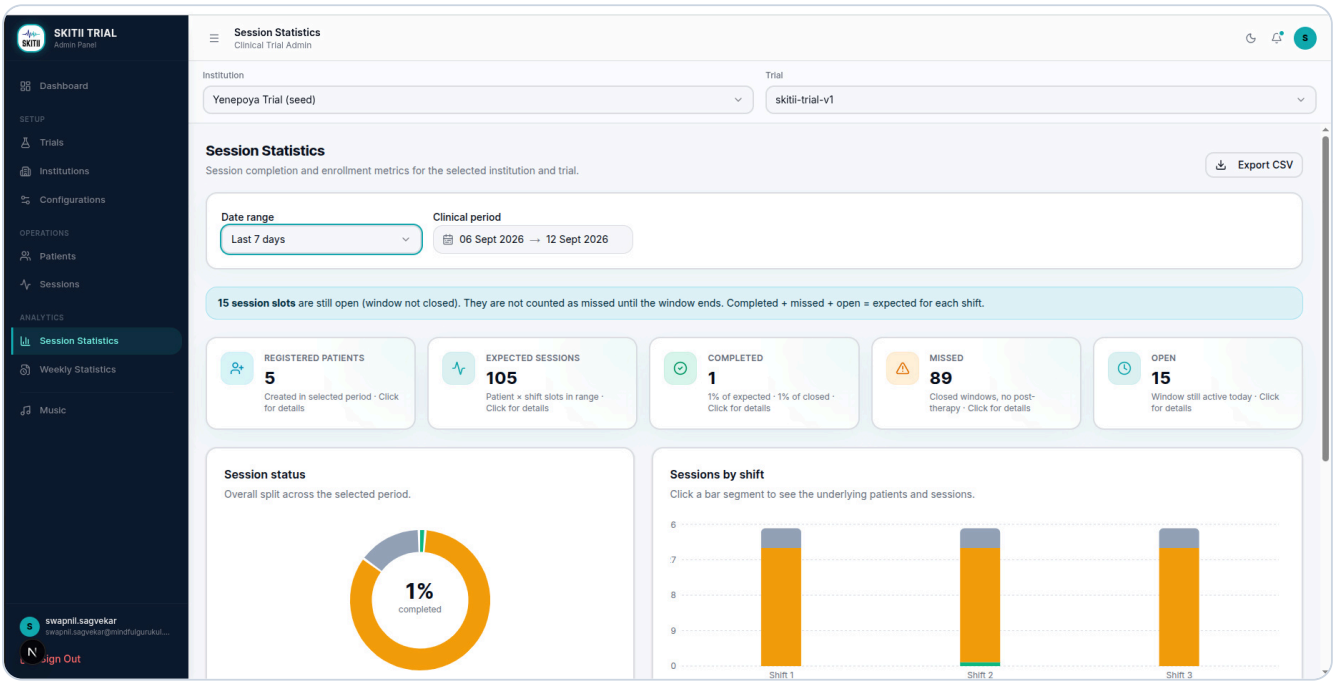

Page flow

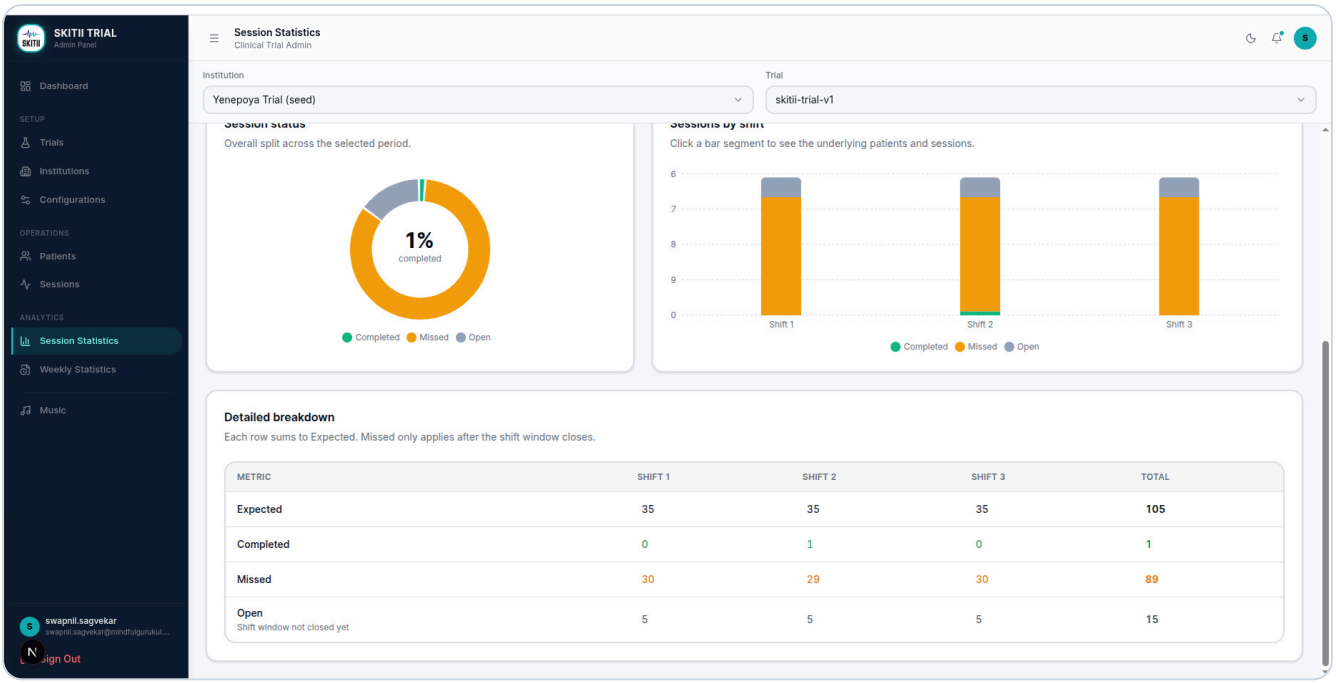

1. Date range
2. KPI cards
3. Charts (overall status + by shift)

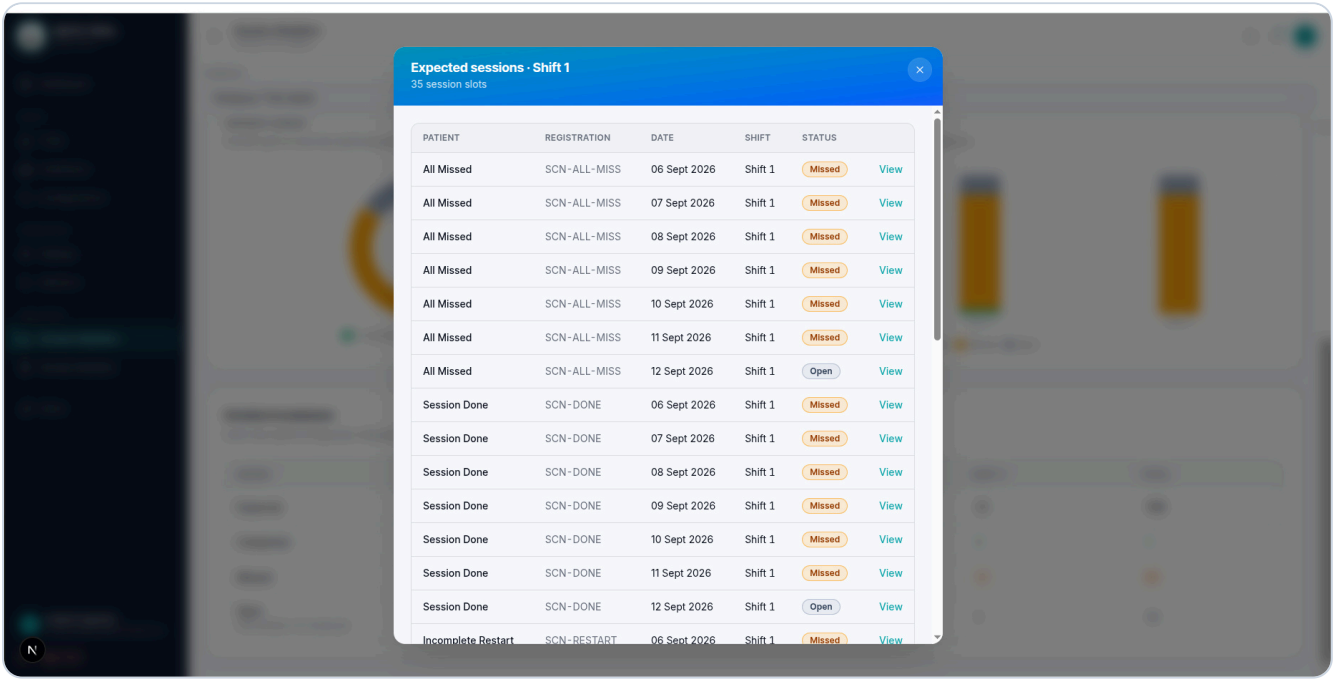

4. Breakdown table
5. Click a KPI or chart segment for the patient / slot list
6. Optional **Export CSV**

KPI	Meaning
Registered patients	Patients created in the selected period
Expected sessions	Patient × shift slots due in range
Completed	Slot finished with post-therapy (rate shown)
Missed	Shift window closed with no post-therapy
Open	Shift window still active — not counted as missed yet

Missed applies only **after** the shift window closes. For each shift: Completed + Missed + Open = Expected.

11. Analytics — Weekly Statistics

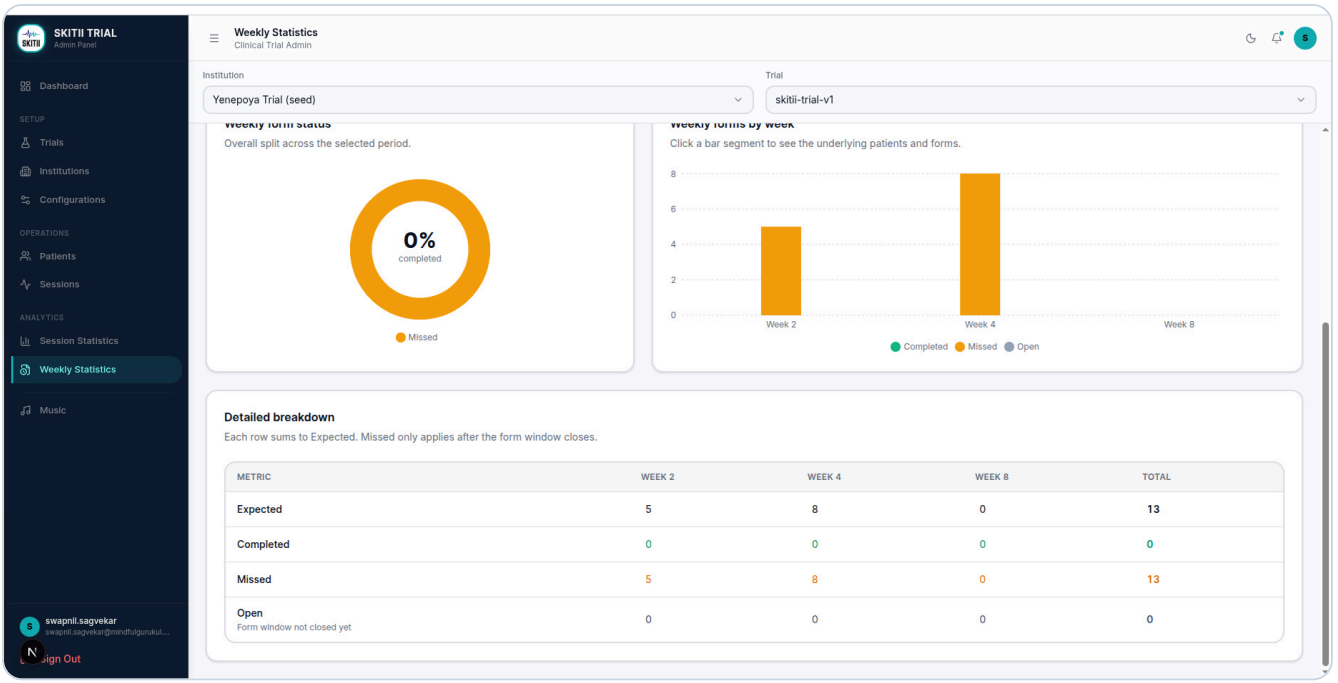

Weekly Statistics shows whether **weekly clinical forms are completed on time**.

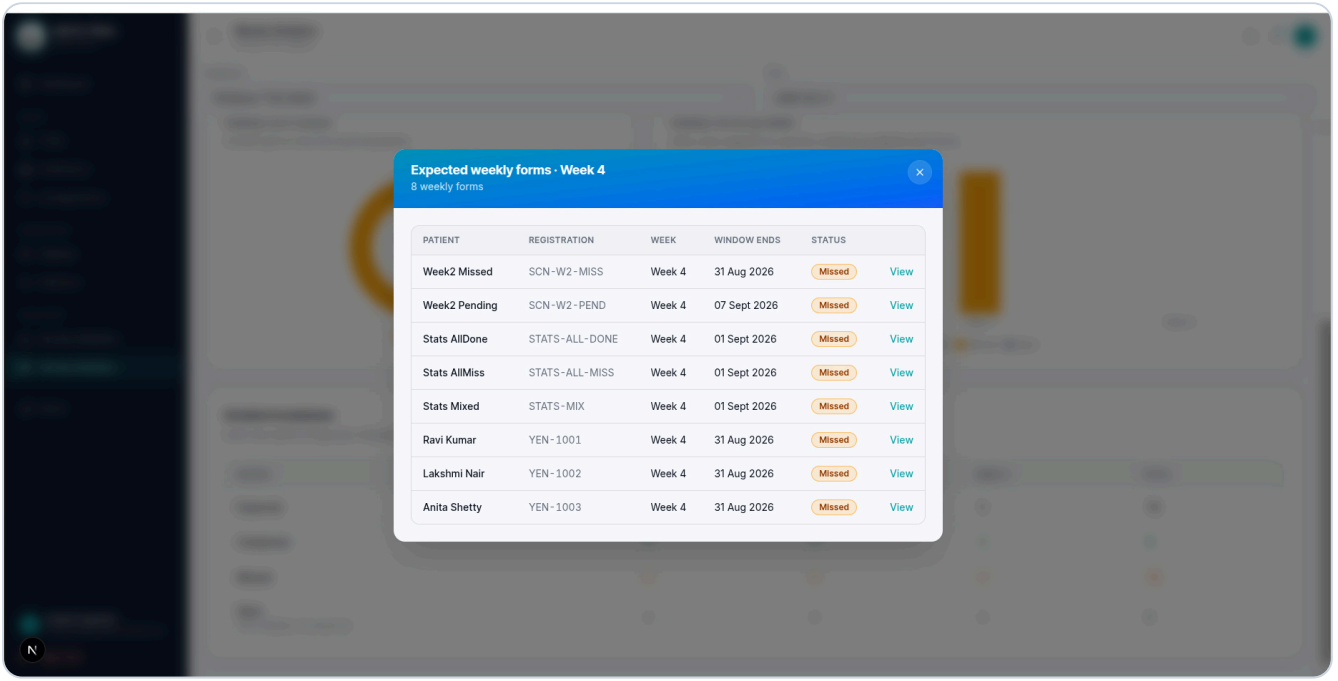

Same pattern as Session Statistics (date range → KPIs → charts → table → drill-down), with the axis as **study week** (Week 0, 2, 4, … from the trial definition) instead of therapy shift.

	Session Statistics	Weekly Statistics
Focus	Therapy shifts	Weekly clinical forms
Axis	Shifts 1 / 2 / 3	Study weeks
Unit	Session slots	Weekly form windows
Missed	No post-therapy after shift closed	Form window closed, form not fully completed

Together, the two screens cover operations completion (sessions) and clinical-review completion (weekly forms).

12. Music

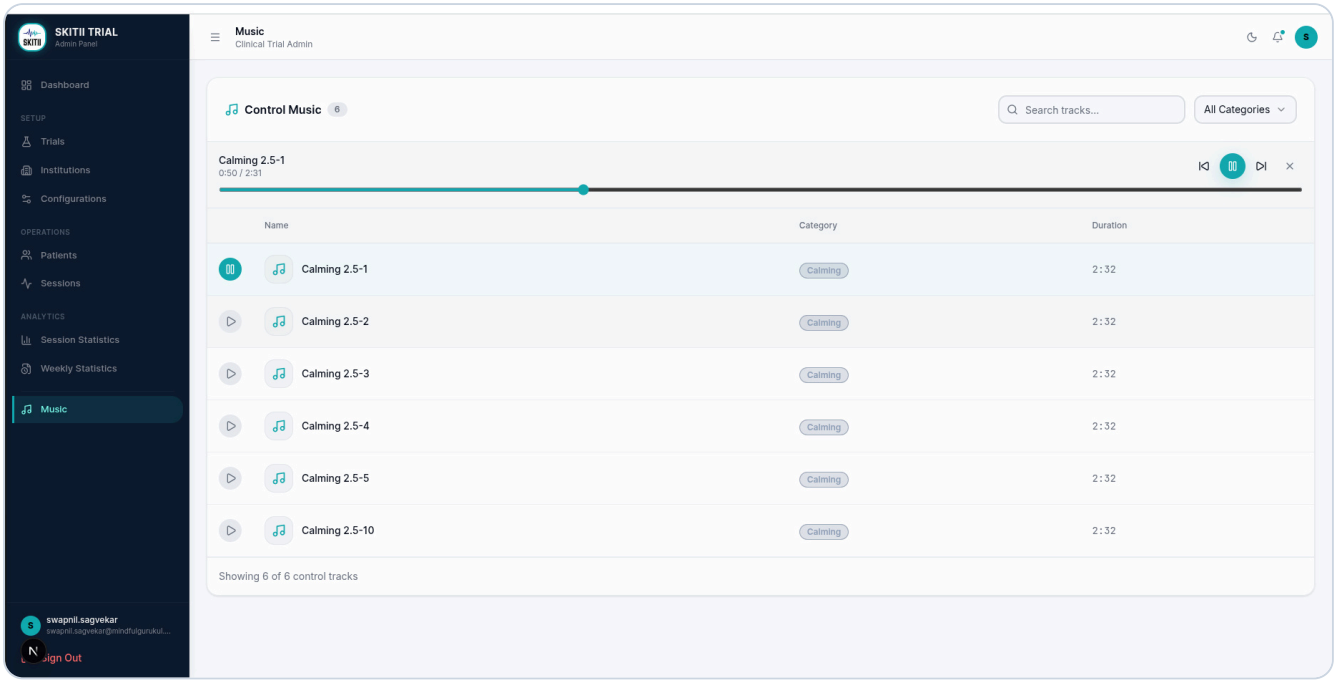

The Music page previews the **control-group** catalogue — tracks available to control patients during sessions.

Capabilities

- Browse list (title, category, duration)
- Search by name
- Filter by category (e.g. Calming, Meditation, Nature Sounds)
- In-page player: play / pause / seek / previous / next

Not included on this page

- Upload new tracks
- Catalogue CMS / library editing

13. End-to-end flow

How the modules connect in practice:

1. **Sign in** with email OTP
2. Select **Institution** + **Trial**
3. **Patients** — enrol and review weekly forms
4. **Sessions** — review therapy visits and readings
5. **Session Statistics** and **Weekly Statistics** — completion metrics
6. **Configurations** — weekly PIN and hospital↔trial mapping when needed

Setup (Trials, Institutions, Configurations) establishes the study. **Operations** and **Analytics** support ongoing trial monitoring.

14. Scope boundaries

Outside Trial Admin	Handled by
Start or stop a live therapy session	Tablet app
Create / edit hospital master records	Product / auth
Upload or manage the music library	Separate catalogue tooling
Product-wide users, roles, and permissions	Product Admin (RBAC)
Fill weekly forms as the clinician	Tablet (admin reviews only)

Quick module map

Section	Module	Purpose
—	Dashboard	Counts and shortcuts
Setup	Trials	Protocol (duration, shifts, weekly forms)
Setup	Institutions	Read-only hospital list
Setup	Configurations	Hospital↔trial map, weekly PIN, cache
Operations	Patients	Enrol, edit, view, weekly form review
Operations	Sessions	Review therapy sessions and readings
Analytics	Session Statistics	Shift completion KPIs and drill-down
Analytics	Weekly Statistics	Weekly form completion KPIs and drill-down
—	Music	Control music preview
